

Trees • Broken Arrow Nursery 2018

Acer buergerianum - Trident Maple - Z5

A slow growing small to medium deciduous tree native to China. Leaves are generally described as having three lobes and a rich, dark green coloration. That said, several have noted tremendous variation in leaf morphology. Bark is a blend of gray, orange and brown and exfoliates in plates and scales with age. In autumn the foliage takes on magnificent yellow, scarlet and orange tones that can rival some of the best colors around. An excellent small specimen tree for use near a patio, lawn or as a street tree. Also a fine choice for bonsai. 25' **Assorted Specimens Individually Priced**

'Mino Yatsubusa' - A dwarf, densely branched shrub growing 6-8' tall in 15 years. Stems are tightly packed with leaves that have a distinct, elongated central lobe and reduced side lobes giving an unusual sword-like appearance. The foliage is green during the growing season turning bright shades of scarlet and orange in autumn. An excellent choice for specimen plantings or for bonsai. - #2 \$49.99 (July); #6 \$149.99; #7 \$179.99 (July)

'Wako Nishiki' - Wako indeed! This fascinating trident maple rates way up there on the weird meter. As you'll see, the dainty, three-lobed leaves emerge in spring ghostly-white... so white you'll wonder how it manages to survive. Fortunately, green slowly materializes through the season and each leaf transforms to lime-green by mid-summer. Fall pushes the green away again making way for respectable reds and oranges! Plants are moderate growers gaining 6" yearly. Some shade, especially in spring, is best. #2 \$49.99 (July); #7 \$179.99

Acer campestre - Hedge Maple - Z4

A moderate-sized, rounded maple species maturing some 25-30' in height. The five lobed leaves are dark green throughout the growing season and transition to yellow in late autumn. Plants are tough as nails performing admirably in difficult urban settings where compaction, high salt levels and pollution are common. Additionally, they are tolerant of severe pruning and can be shaped into hedges or screens.

'Carnival' - A staggeringly beautiful, semi-dwarf selection of hedge maple that flaunts green leaves boldly edged with broad white and pale pink margins. This is truly a show-stopping plant sure to draw attention in a prominent garden space. Plants are much slower growing than the species and benefit from part shade and even moisture. 10' - #5 \$99.99; #6 \$149.99; #7 \$179.99 (July); **Assorted Specimens Individually Priced**

'Pulverulentum' - A fine form with foliage overlaid with a healthy dose of yellowish-white blotching and speckling. Plants are easy to grow and perform well in all but the soggiest of conditions. Could be used to make the coolest variegated hedge! #2 \$39.99

Acer carpinifolium - Hornbeam Maple - Z5

A fine small maple forming a densely branched, spreading canopy in time. The simple, medium green leaves are quite un-maple-like, more closely resembling a hornbeam or beech. In autumn, luminous butter yellow tones prevail. Often a challenging plant to identify and certainly one worth trying to stump the neighborhood plant geek with. 20'

'Esveld Select' - A highly regarded selection of hornbeam maple from Europe's famed Esveld Nursery. Plants develop a manicured, near columnar framework of elongated strap-like leaves with striking heavily serrated margins. Though significantly smaller than the straight species they more than make up for it with unique character and curb-side appeal. 8' - #3 \$69.99; #5 \$99.99 (July)

Acer circinatum - Vine Maple - Z5

Vine maple is a large shrub or small tree with a vase-shaped, spreading branch structure. The species is native to western North America where it inhabits understory environments along the Pacific coast. The medium green, palmately lobed leaves are

broad and spreading, resembling those of *Acer japonicum* or *A. shirasawanum*. In autumn, they often turn to eye-catching shades of orange, yellow and red. 25'

'Burgundy Jewel' - A slower growing version of vine maple that showcases unique, burgundy-red leaves. Plants maintain this color quite well throughout the growing season when sited in a full sun exposure. In autumn the leaves transition to lively shades of burnt-orange and scarlet. - **Assorted Specimens Individually Priced**

'Pacific Fire' - An alluring cultivar of vine maple sure to impress with its brilliant scarlet-coral stems that shout vibrantly and demand attention during the cold seasons. In late spring and summer the stems become more subdued, transforming to a blend of yellow and green tones. As with the straight species, fresh green, broadly lobed leaves are handsome and remain free from blemishes throughout the growing season. - #7 \$149.99; **Assorted Specimens Individually Priced**

Acer griseum - Paperbark Maple - Z5

An uncommon and truly spectacular maple that will mature into a wonderful small specimen tree. The unique, three-parted, dark green leaves are free of insect and disease problems and develop impressive red to orange fall color. In winter, the brilliant, exfoliating, reddish-brown bark stands alone in the landscape. Grows best in rich, well-drained sites in full sun or part shade. 25-30' - #2 \$39.99 (July); #3 \$69.99; #5 \$99.99 (July); #7 \$149.99; **Assorted Specimens Individually Priced**

Acer japonicum - Full Moon Maple - Z5

A handsome maple species closely related to its cousin, *Acer palmatum*. Plants mature into broad spreading, 20-30' trees. The lobed leaves are soft green and change to vivid shades of yellow, orange and red in autumn.

'Aconitifolium' - A striking, small-stature maple with large, finely textured, bright green leaves. In fall, the deeply lobed leaves transform to shades of crimson, orange, and yellow over a several week period. Surely one of the best small trees for fall color display. Additionally, spring's clusters of yellow and red flowers provide intrigue when present for added seasonal value! Matures 15-20' high and wide. - #3 \$69.99; #5 \$99.99 (July); **Assorted Specimens Individually Priced**

Acer longipes - Longipes Chinese Maple - Z5

An uncommon yet alluring maple hailing from China's Sichuan Province. The durable plants offer moderate to strong vigor and excellent heat tolerance as well as adaptability to urban stress. The large, sleek leaves are tidy and deep green in color during spring and summer. In autumn, fall color grades to soft yellow shades. Expect plants to reach 20-30' tall and wide when mature.

NEW *longipes* ssp. *amplum* **'Gold Coin'** - A vibrant maple offering up high glamour leaves that emerge with soft burgundy tones before quickly moving to rich golden-orange colors. The palm-shaped leaves are about 4" in diameter and hold their color deep into summer. Plants develop a shrubby canopy reaching 12-15' tall when mature. Availability has been limited due to the difficulty of propagation. That said, plants should be prized as they're certainly among the best of the gold foliage maples available. - #2 \$39.99 (July); #3 \$79.99; #7 \$179.99 (July); **Assorted Specimens Individually Priced**

Acer macrophyllum - Bigleaf Maple - Z6

A North American native maple found in habitats from Alaska to southern California. As the name implies plants have huge dark green leaves often exceeding 12" in breadth. Leaves are supported on strong, glabrous stems and branching that can rise to 50' or more when mature. Plants are at their best in stress free environments that see limited heat and drought stress. Though the straight species is rarely cultivated on the east coast we find that the cultivars have special merit for texture and color.

NEW **'Mocha Rose'** - A strong growing and vigorous bigleaf maple best known for its large, palm-shaped leaves that welcome spring with striking shrimp-pink tones. As the season develops the leaves take on mocha tones that remain distinct amidst the greens of summer. Plants are strong growing and can be expected to grow 12-15" annually. - #2 \$39.99 (July); #3 \$69.99 (July); #5 \$99.99 (July)

Acer manschuricum - Manchurian Maple - Z4
A fabulous maple species closely allied to both *Acer triflorum* and *Acer griseum* sporting similarly shaped trifoliolate leaves. The strong growing trees are native to regions of Siberia, Korea, China and Manchuria where they obtain impressive proportions and a handsome oval to vase-shaped crown. Fresh green leaves are held on elongated, wiry petioles and transform to luminescent shades of scarlet and red in autumn. The bark is a step apart from its cousins displaying smooth, gray qualities rather than an exfoliating nature. Plants perform admirably in both full sun and part shade exposures in average garden soil and are among the most cold hardy of the trifoliolate maples. 40-60' - **Assorted Specimens Individually Priced**

Acer palmatum - Japanese Maple - Z5
An extremely variable maple species that has been cultivated for thousands of years. Hundreds of selections have been made throughout the world that showcase different ornamental features. All perform best in well-drained garden soil in either full sun or partial shade.

'Aizumi Nishiki' - A vibrant addition to the diversity of Japanese maples in our collection. 'Aizumi Nishiki' is essentially an improved version of the classic 'Orido Nishiki' with brighter color, improved consistency and a heftier dose of pink and creamy-white splashes amongst the green of the foliage. Startling scarlet striped stems add value to the bare twigs during the dormant season. Plants are reasonable growers though ultimate size and form are still unknown. - **Assorted Specimens Individually Priced**

'Alpenweiss' - A slow growing Japanese maple prized for its spring flush of white and pink edged foliage. Charming amber, red and gold autumn tones provide added seasonal interest. - #7 \$179.99; **Assorted Specimens Individually Priced**

'Ariadne' - A fine selection from the famed Dutch nursery PlantenTuin Esveld and named after owner Cor van Gelderen's daughter. Plants burst forth in spring with a bright flush of pastels, mixing shades of peach, orange and salmon with deeper greens along the veins. The heavily serrated leaves are equally impressive in autumn when vibrant strawberry red tones mix with soft pink to command attention. The strong growing plants are upright and spreading and average 8-12" of growth annually. **Assorted Specimens Individually Priced**

'Bihou' - An impressive recent Japanese maple selection with a name that translates to "beautiful mountain range". Plants are moderate growers developing into upright small trees over time. Foliage is pale green during the growing season evolving to rich, golden-orange in fall. During cool winter months the bark transitions to a bright yellow color that adds much visual contrast and life to the dormant garden. Plants are strong growing yet a bit less cold hardy than most cultivars. Best reserved for warmer parts of Zone 6. - #5 \$99.99; #7 \$149.99 (July)

'Bloodgood' - An upright growing selection that matures 25' in height. It is widely regarded as one of the best and most cold hardy purple-leaf cultivars. The foliage color holds well through the season and turns brilliant red in autumn. **Assorted Specimens Individually Priced**

'Fairy Hair' - One of the most unique maples you'll come across. As the name suggests, 'Fairy Hair' sports extremely narrow, hair-like leaves that are so fine they resemble pine needles. Plants are quite slow-growing forming irregularly branched 2' tall specimens over a 10 year period. - #6 \$199.99; #7 \$249.99 (July); **Assorted Specimens Individually Priced**

'First Ghost' - An incredible recent selection showcasing leaves that emerge nearly white, highlighted with a network of faint green veins and irregular pinkish-red edges. The leaves pick up added green coloration as the season progresses and summer sets in. Autumn brings a final riot of yellowish-orange tones. - **Assorted Specimens Individually Priced**

'Geisha Gone Wild' - A superb new maple cultivar boasting wild and crazy foliage that blends a purple-green leaf base with a prominent flamingo pink and white margin. Certainly unique and one of those plants we raved about for weeks after our initial introduction. Plants are slow growing developing into moderate-sized shrubs over time. - #3 \$79.99; #5 \$109.99 (July); **Assorted Specimens Individually Priced**

'Hana Matoi' - A very fine maple forming a broad arching crown in time. The pendant branches are cloaked with ribbon-like green leaves boldly illuminated with clever splashes of white, pink and crimson. Plants are distinctive, graceful and among the more stunning of the recent Japanese maple selections. 4' x 6' #7 \$199.99; **Assorted Specimens Individually Priced**

'Hubb's Red Willow' - A small, oval-shaped clone boasting spectacular, deep purple, palm-shaped leaves. Each leaf has elongated, narrow lobes that add a distinct, ribbon-like texture to the garden. Superb orange-red fall color adds additional interest in autumn. 8' tall x 4' wide over a 10 year period. - #7 \$179.99; **Assorted Specimens Individually Priced**

'Ikandi' - A moderately-sized Japanese maple with an ascending branch framework and intense pink-flushed spring growth. As the days grow longer the pink infusion evolves through stages. Initially the foliage exhibits strong pink margins against a pale green backdrop before settling in for summer with a green leaf interior, edged with bright white. The restrained growers can be expected to average nearly a foot of growth annually and will reach 10' in height over a 10 year period. - #2 \$49.99; #3 \$79.99; **Assorted Specimens Individually Priced**

NEW **'Japanese Princess'** - A choice dwarf Japanese maple with heritage from the classic selection 'Mikawa Yatsubusa'. This exceptional pedigree brings together radiant pink-flushed spring growth held along an architectural framework of sculpted branches. As the season develops the foliage picks up cream infusions with pink overtones. As with many Japanese maples, strong red and orange tones dominate the autumn palette. The slow growing plants are well suited to the rock garden and can be expected to reach 2' in height and breadth over 10 years. - #2 \$79.99; #3 \$129.99 (July); **Assorted Specimens Individually Priced**

'Koto no Ito' - An upright twiggy maple forming a small tree or shrub in time. Branches are cloaked with delicate, finely-lobed, rich green leaves that add a valuable element of textural contrast to the garden. In autumn, rich orange fall colors add zest and brightness to the landscape. - #2 \$49.99 (July); #3 \$89.99; #5 \$129.99 (July); #6 \$179.99; #7 \$199.99 (July); **Assorted Specimens Individually Priced**

'Kurenai Jishi' - A distinctive and exciting dwarf Japanese maple that develops into a sculpted framework of tight branches that show off curiously lobed greenery. In spring, the leaves emerge with a strong orange glow that transitions through chocolate purple tones before becoming infused with hints of green by late summer. This one stands out in the crowd and is sure to become an excellent addition to the palette of maples available. #2 \$49.99; #3 \$79.99 (July); #7 \$199.99; **Assorted Specimens Individually Priced**

NEW **'Kuro Hime'** - A new Japanese maple that we only recently added to the collection and have little information on. The plants look to be standouts in the crowd. The dwarf, shrubby specimens sport diminutive palm-shaped leaves comprised of five distinctive lobes. In spring the growth elongates in shades of bright pinks and reds. As the season progresses these colors age to rich green prior to transforming to a riot of scarlet-orange in September and October. The slow, sculpted growers can be

expected to reach 2-3' high and wide after 10-15 years in the garden. - #2 \$49.99; #3 \$89.99 (July); #6 \$179.99; #7 \$199.99 (July); **Assorted Specimens Individually Priced**

'Kurui Jishi' - A slow growing, vase-shaped tree with a Japanese name that loosely translates to "crazy or confused lion". No doubt, this namesake is derived from the fresh green leaves that are uniquely and uniformly rolled along the margins. This distinctive quality persists through the growing season into fall when the leaves take on rich golden-yellow tones prior to senescence. Plants add 6 to 8" of growth annually and will top out in the 12' size range. - #7 \$179.99; **Assorted Specimens Individually Priced**

'Manyo No Sato' - Yet another funky Japanese maple to add to the collection. This fine selection offers dazzling green and purple variegated leaves. Certainly quite showy and should prove to be the perfect mate for some of you wild and crazy gardeners. Plants are moderate to slow growers reaching 6' tall and 4' wide over 10 years. - #2 \$49.99; #3 \$79.99 (July); #7 \$179.99; **Assorted Specimens Individually Priced**

'Mikawa Yatsubusa' - An aesthetic treasure developing a unique, multi-branched, 6-7' sculpted form in time. The light green foliage is tightly packed along the stems in a neatly arranged, shingle-like pattern. Attractive, yellow-orange fall color and red samaras provide added appeal. A great plant for the rock garden. - #2 \$59.99; #3 \$89.99 (July); #6 \$179.99; #7 \$199.99; **Assorted Specimens Individually Priced**

'Mikazuki' - A shrubby Japanese maple that we recently became smitten with for both foliage and form. The prominently veined, palm-shaped leaves sport colorful shades of pink, white and lavender in an intricate pattern that retains its prominence well through much of summer. Leaves are supported on an equally distinctive upright branch structure. Plants are average growers reaching 8' tall and 5' wide over 10 years. - #3 \$79.99; #5 \$109.99 (July); **Assorted Specimens Individually Priced**

'Olsen's Frosted Strawberry' - A fine addition to the growing array of Japanese maples at the nursery. This open, ascending selection welcomes spring with a breathtaking flush of heavily colored leaves in shades of violet-red accented with silver accent. The veins are deeper colored than the surrounding tissue giving the illusion that the leaves have been draped with burgundy netting. Certainly worth growing for the spring drama even though the display does become more subdued with the heat of summer. The ultimate proportions of this new selection are still unknown though we're confident that 8-10' is within the realm of possibility. #2 \$49.99; #3 \$79.99 (July); #6 \$179.99; #7 \$199.99 (July); **Assorted Specimens Individually Priced**

'Orangeola' - An attractive and versatile weeping cultivar sporting lacy, burgundy-red foliage throughout the growing season. In autumn the leaves take on burnt-orange and fiery-red hues. Plants are among the most vigorous of the weeping Japanese maples and will mature 6' tall x 10' wide over a 20 year period. - #3 \$79.99; #5 \$109.99; #7 \$199.99; **Assorted Specimens Individually Priced**

'Peaches and Cream' - 'Peaches and Cream' is a spring treat you soon won't forget as the palm-shaped leaves emerge with a magical pastel pink and rose overlay. Exquisite and sure to stop you in your tracks at this time of the year. As the season progresses the foliage ages to pale green. Plants assume an upright, arching form and reach 10-12' tall when mature. #2 \$49.99; #3 \$79.99 (July); #6 \$179.99; #7 \$199.99 (July); **Assorted Specimens Individually Priced**

'Peve Multicolor' - We stumbled across 'Peve Multicolor' more than half a decade ago while in pursuit of the very best and most distinct in the world of Japanese maples. This fine semi-dwarf instantly caught our eye with its broad palm-shaped leaves that are heavily dusted with pink and white. Certainly distinctive from its neighbors and one that we're delighted to finally have available. Ultimate size is still unknown though 12-15'

is our current estimate. - #2 \$49.99; #3 \$89.99 (July); #5 \$129.99 #7 \$199.99; **Assorted Specimens Individually Priced**

'Peve Starfish' - A distinct and fun Japanese maple that sports rich burgundy leaves with pronounced rolled lobes. Plants are moderate growers and can be expected to reach 8' in height over a 20 year period. A fine new selection from Vergeldt Nursery in Holland that truly stands out in the crowd. - #2 \$49.99 (July)

'Pink Filagree' - Yet another valuable dissected Japanese maple that has caught our attention. This dwarf, low growing selection salutes spring with vibrant rose-pink hues that become infused with a shroud of green as June and July arrive. In autumn, orange and red take the wheel and carry the show into November. 3-4' - #3 \$79.99; #5 \$109.99 (July)

'Purple Ghost' - An upright, vase-shaped Japanese maple selected for its intense burgundy purple foliage marked with a web-like skeleton of onyx black veins. In autumn the leaves morph to equally impressive scarlet and red tones that help set the garden afire as the weather becomes crisp. A superb selection that acts like a magnet to the eye with its strong garden presence. 15-18' - #6 \$179.99; #7 \$199.99 (July); **Assorted Specimens Individually Priced**

'Rainbow' - An awe inspiring selection of Acer palmatum that captivates with a healthy dose of flamingo-pink variegation juxtaposed with the deep purple base color of the leaves. The extent and pattern of coloration can vary from leaf to leaf and a bit of upkeep to remove the less exciting shoots is occasionally warranted. That said, when grown well, 'Rainbow' ranks with the best that this animated genus has to offer. #2 \$49.99; #3 \$89.99; #5 \$129.99 (July)

'Red Filagree Lace' - A spectacular weeping, cutleaf Japanese maple with leaves among the most finely dissected of the group. Delicate in appearance and graceful in texture the rich merlot leaves add a grace and elegance to the garden in a way that few plants are able. In autumn, the stylish branch structure erupts with fiery scarlet-crimson tones. Plants develop a mounded canopy that is generally broader than tall reaching 3-4' wide by 2' high in 15 years. - #5 \$109.99

'Ryusen' PP 18501 - In the world of Japanese maples there are those that weep and then there are those that WEEP! The exciting new green leaf selection 'Ryusen' falls into the latter category with branching that is as pendulous as any plant we know. If left untrained plants will form irregular, creeping groundcovers that are perfect for meandering through boulders or sprawling down a bank. Staked plants form a distinctly vertical column with all secondary branching falling tightly against the central leader. Certainly a fun plant to play with and one we're excited to offer this year. Discovered and introduced by Japan's famed Kobayashi Nursery. - #2 \$49.99 (July); #7 \$199.99; **Assorted Specimens Individually Priced**

NEW 'Sango Kaku' - The classic "coral bark maple" with green stems that turn brilliant coral-red in winter. The upright growers mature 15' in height. Best reserved for zone 6 gardens. #2 \$49.99; #3 \$79.99 (July)

'Shaina' - A recent selection that has begun to cause quite a stir. Discovered as a witches' broom on a plant of A. palmatum v. atropurpureum, this diminutive beauty has red-maroon foliage throughout the growing season. Bright crimson-scarlet fall color dominates the autumn landscape. Plants assume an irregular upright-oval outline and develop character with age. Makes an excellent container subject or addition to the rock garden. 6' - #3 \$89.99; #5 \$129.99 (July); #6 \$179.99; #7 \$199.99 (July)

'Sharp's Pygmy' - A dense, shrubby Japanese maple forming a rounded crown of twiggy branches cloaked with tightly packed fresh green leaves. In autumn the foliage takes on rich orange and scarlet tones that provide a reliable display at the end of each growing season. Plants are among the most diminutive of all maples and certainly an excellent option for adding a Japanese feel to the garden. 4' high and wide in 10 years. - #2 \$49.99; #3 \$89.99; #5 \$129.99 (July)

'Shishigashira' - A choice, semi-dwarf selection with distinctive curled and twisted small green leaves that add a unique ruffled texture to the landscape. In fall, the leaves transition to a handsome burnt-orange display that remains attractive for an extended period. - #3 \$89.99; #6 \$179.99; #7 \$199.99; **Assorted Specimens Individually Priced**

'Spring Delight' - A recent weeping Japanese maple selection that forms a spreading mound of fresh green foliage. Each leaf is highly dissected and picks up rich shades of orange and red in autumn. Plants are vigorous growers reaching 2-3' tall and 5' wide in 10 years. - #6 \$179.99; #7 \$199.99 (July)

'Tamuke Yama' - A highly desirable weeping Japanese maple boasting heavily dissected foliage in shades of rich burgundy and purple. Plants are strong growers and show better tolerance to summer heat than many other similarly described selections. In autumn the leaves transition to fiery tones of scarlet and red. An excellent accent plant in the garden with exquisite quality throughout the year. 6' x 12' - #2 \$49.99; #3 \$79.99 (July); #7 \$179.99

'Ukigumo' - Commonly known as "The Floating Cloud Maple" this brilliant selection offers foliage mottled with a blend of pink and white. From a distance the leaves appear to blend together into a mounding, cloud-like form. Specimens are vigorous, upright growers and provide a graceful display unlike most variegated plants. - #3 \$79.99; #5 \$129.99; #7 \$199.99

'Viridis' - A weeping selection with lacy, bright green foliage during the summer months and excellent orange-red fall color. Should find a happy home in most gardens. - #7 \$199.99; **Assorted Specimens Individually Priced**

NEW 'White Peaches' - A shrubby Japanese maple selection with an upright structure in youth though plants will become broader with age. New growth in spring is eminently desirable, blending cream tones with delicate pinkish-red tips. With the onset of summer the leaves transition to a white backdrop crowned by deep green veins. Plants provide the best performance in bright overstory shade and can be expected to reach 10-12' high and wide at maturity. - #6 \$179.99; #7 \$199.99 (July)

Acer pectinatum ssp. forestii - Forest Maple - Z4
A rare Asian species related to our native striped maple. Plants are vigorous and develop into small stature, upright trees. They exhibit white-striped branches that turn maroon-red in winter. Bright, butter-yellow fall color adds seasonal interest. Grows best in full sun or part shade in acid, well-drained soil. In our trials, plants seem to be more tolerant of adverse conditions than other "striped" maples. 25' **NEW 'Mozart'** - Mozart' is an alluring snakebark maple that we're delighted to offer. The prized small trees assume an open framework of richly colored scarlet-purple and silver streaked twigs that serve to add special excitement and to awaken the dormant garden. In spring, red-flushed growth welcomes the warming weather before gradually transitioning to deep green. Discovered as a chance seedling by Dutch nurseryman Peter Vanlaerhoven. 15-25' - #3 \$89.99; #5 \$129.99 (July)

Acer pictum ssp. mono - Painted Maple - Z5
A close ally to *Acer truncatum* and one with a confusing and complex nomenclature with some treating this as its own species, others as a subspecies or variety. Regardless of its place in the world of maples, plants are most certainly garden worthy. The small to medium sized-trees offer a rounded crown of broad, palm-lobed leaves of deep green and glossy finish. The smooth gray bark breaks into shallow longitudinal fissures with the patina of age. Plants typically top out in cultivation around 30-40' offering urban tolerance with high durability in hot and dry locations. Plants also demonstrate adaptability to sun and part shade exposure.

'Usugumo' - A rare yet striking variegated form of painted maple showcasing pale green, prominently pointed palm-shaded leaves pleasingly highlighted with an abundance of tiny

white stipples and speckles. The coloration is most prominent near the veins and remains attractive throughout the growing season before yellow and gold fall colors develop. Plants are a bit slower growing than the straight species topping out around 8-12' in height over 15-20 years. - #2 \$49.99 (July); #3 \$89.99; #5 \$129.99 (July); #7 \$199.99; **Assorted Specimens Individually Priced**

Acer platanoides - Norway Maple - Z4
A long cultivated and to some extent less than exciting species maple that has become overplanted and weedy in much of the country. Plants are very durable in the garden showing much durability in urban situations and adaptability to varied soil and light conditions. The straight species typically develops an irregular-rounded canopy, rising to 40-50' in height and spread. That said, there are many cultivars that offer different frameworks. If you're still reading you must be wondering why we've listed it. Presently our inventory of Norway maple cultivars is limited to a couple of slow-growing and curious cultivars that have shown very cool garden qualities coupled with just about zero flower production or seed set. Essentially these cultivars go against the grain of the species and most cultivars, showing rarity, intrigue and an overall lack of weediness. If you're interested read on.

NEW 'Curly Lampost' - An amazing plant that really needs no description! Hands down the rarest plant we offer with unmatched visual impact in the garden! Those that know the plant want the plant! Extremely difficult to propagate and rarely made available. - #2 \$129.99 (July); **Assorted Specimens Individually Priced**

'Emerald Orb' - A fun new selection of Norway maple that we finally decided to name and introduce after numerous favorable comments and more than a decade's worth of trial and evaluation. The original plant was selected as a seedling from a witches' broom that was discovered by the late Dr. Sid Waxman. Over the years our plant has developed a perfectly symmetrical rounded framework of tightly spaced branches. Each stem is cloaked with classic-sized, deep green leaves that stack tightly against one another. Though the straight species shows invasive qualities this selection has yet to display any flower structures or seeds. Plants are notably slower growing than the species and average perhaps 6" of growth annually. Ultimate proportions are still unknown yet we anticipate mature plants are capable of reaching 10' high and wide over 20-30 years. - #2 \$49.99 (July); #3 \$79.99; #5 \$109.99 (July)

Acer pseudosieboldianum - Purple Bloom Maple - Z5
Another seldom encountered relative of *Acer palmatum* that develops into an airy, open branched 20' specimen. The medium green leaves and unique purple flowers are born along muscular, sculpted stems. In autumn the foliage changes to hot tones of yellow, orange and red.

var. *takesimensis* - A superior Japanese maple relative of considerable beauty that is extremely rare in cultivation. The shrubby, vigorous growers are durable landscape plants with superior cold hardiness when compared to *Acer palmatum*. Plants showcase rounded, palm-shaped leaves that are rich green throughout the season turning to an intense riot of orange, scarlet and burgundy in fall. Native to the island of Ulleung Do which lies off the eastern coast of Korea. 20' - #3 \$69.99; #5 \$99.99 (July)

Acer rubrum - Red Maple - Z3 - **Native**
A wonderful native species of the eastern and midwestern United States known best for its urban tolerance and spectacular scarlet red fall foliage display.

'Brandywine' - A long cultivated selection of our native red maple that was developed as part of the U.S. National Arboretum breeding program. The seedless plants offer glaucous leaves tinged with silver beneath. In autumn sumptuous red to intense red-purple tones dominate. 35-40' - **Assorted Specimens Individually Priced**

'Jose's Variegated' - A distinctive and rare variegated selection of our native red maple discovered in North Carolina. The vigorous plants offer three-lobed medium green leaves delicately stenciled with a thin, refined cream-white margin. Plants exhibit strong growth and comparable durability to the straight species. 30' **#2 \$39.99; #3 \$69.99 (July)**

'Vanity' - A new variegated selection of red maple that appears to be like (or maybe even better) than the cultivar 'Snowfire' ('Candy Ice') that we've cultivated for years. Though the jury is still out the images online certainly show off brilliant pink and white flushed growth and a riot of scarlet-pink autumn magic. That's enough to get us salivating with intrigue and as a result we've brought in a few to try. We'll let you know more when we know more! - **#7 \$149.99**

Acer rufinerve - Redvein Snakebark Maple - Z5

A small deciduous tree native to the mountains of Japan. Medium green bark is marked with attractive grayish-white stripes when young and develops a diamond pattern at maturity. The three-lobed leaves have characteristic reddish tufts of hair on the veins when young and turn attractive shades of orange and yellow with reddish overtones in autumn. Overall an attractive small tree for shade to partial shade.

'Winter Gold' - This small stature tree has yellow-green twigs in summer which transform to bright orange-gold in winter. The effect in the winter garden is amazing and not unlike that of *Cornus sanguinea* 'Midwinter Fire'. Difficult to propagate and as a result rarely offered. - **#2 \$49.99; #3 \$89.99 (July); #5 \$129.99; #7 \$179.99 (July)**

Acer saccharum - Sugar Maple - Z3 - **Native**

A classic tree native to the eastern and midwestern US. Often thought of as one of the finest native maple species. Develops spectacular fall color in all shades of yellow, red and orange. Slow to medium growth rate with excellent hardiness. 40-60'

'Millane's Dwarf' - A very rare dwarf sugar maple maintaining all of the characteristics of the straight species in a smaller package. Plants are very compact achieving 3-4' of new growth annually. The original parent plant is over 50 years old and only 24' in height. An excellent patio or miniature garden specimen. - **#2 \$49.99 (July)**

'Newton Sentry' - This cultivar of sugar maple is a dramatic departure from the species as it rises like a monument from the garden. Plants are extremely upright, ultimately forming a pillar 35' tall and only 5' wide. Makes a great plant for tight places where vertical accent is required. Not for the faint of heart but certainly a plant that many collectors will lust after. - **#2 \$49.99; #3 \$79.99 (July); Assorted Specimens Individually Priced**

Acer shirasawanum - Full Moon Maple - Z5

A rare maple species closely related to *Acer palmatum* and *A. japonicum*. Plants make eloquent specimens, slowly maturing into 20-30' trees. The large, palmately-lobed leaves are medium green during the growing season and change to varying degrees of yellow, orange and red in autumn.

'Aureum' - Known commonly as the "golden full moon maple" this brilliant specimen plant will develop into a 15-20' tree in many years. Glowing, golden foliage emerges in spring and holds through the majority of the season. In fall, leaves can turn fiery shades of yellow, orange and red. Plants perform best in any average garden soil in a partially shaded location. Somewhat difficult to propagate so get yours early as stock always sells out rapidly. - **#7 \$199.99; Assorted Specimens Individually Priced**

'Jordan' - A vigorous maple selection that hails from Italy and showcases striking golden-yellow foliage in spring. Superficially plants closely resemble the fullmoon maple (*Acer shirasawanum* 'Aureum') yet grow significantly faster. Though still new to our collection we've been impressed with its attractive qualities thus far. - **#2 \$49.99; #3 \$79.99; #5 \$109.99 (July); #7 \$179.99; Assorted Specimens Individually Priced**

'Munn 001' Moonrise™ PP 16718 - Yet another improved full moon maple that we're giving a shot. Plants burst forth in spring with rich orange and red emerging growth that transitions to shades of chartreuse and gold during the growing season. Plants are reported to be strong growers with good sun tolerance and will develop into sizeable open branched plants in time. By all accounts this selection appears to be a vastly improved version of the original full moon maple (*Acer shirasawanum* 'Aureum') though the true test will happen in the garden. **#2 \$49.99; #3 \$79.99; #5 \$109.99 (July); Assorted Specimens Individually Priced**

Acer sieboldianum - Siebold's Maple - Z5

Siebold maple is a close cousin to *Acer palmatum* with a native range through southern Japan. The hardy plants sport fresh green leaves that greet spring with a covering of felted white hairs along the midrib, petiole and reverse. Though this quality is limited in ornamental value it is reliable for distinguishing this species from other close allies. In fall the leaves assume handsome orange-red tones commonly associated with the group. Plants develop into medium-sized specimens reaching 15-25' high when mature. Culturally they are at home in rich, well-drained soils with an acidic quality in either full sun or part shade.

'Kumoi Nishiki' - A recent transplant from the Japanese horticulture scene that may be among the more eminently desirable specimen plants to emerge in years. Each palmately lobed leaf is marked with a healthy dose of creamy-white mottling against a medium green canvas. In autumn, rich pink and orange-red tones are integrated into the mix. The upright branched plants are strong growing, sun tolerant and offer a bit more cold hardiness when compared to classic Japanese maples. Ultimate size is still unknown though we expect 15-20' is well within reason. - **#2 \$49.99 (July); #3 \$89.99; #5 \$129.99 (July); Assorted Specimens Individually Priced**

Acer tegmentosum - Manchustriped Maple - Z4

A small, rounded tree native to regions of Manchuria, Korea and Russia. The overall appearance is quite similar to our native *A. pensylvanicum* with rich green stems prominently lined with ghostly white stripes and attractive butter yellow fall color. Plants develop into fine specimens and grow best in locations with even moisture and dappled shade. 20-30'

'Joe Witt' - A superb clone with bloomy, white-blushed twigs and large leaves that transform to shades of rich, golden-yellow in fall. Named in honor of Joe Witt, past curator of the Washington Park Arboretum. - **#2 \$39.99; #3 \$69.99; #5 \$99.99 (July); #7 \$149.99; Assorted Specimens Individually Priced**

Acer triflorum - Three Flower Maple - Z4

An uncommon trifoliolate maple closely related to *Acer griseum*, the paperbark maple. Plants exhibit tan-brown bark that exfoliates in vertical strips and scales. In autumn the dark green leaves turn spectacular shades of red and orange. Ultimate size will approach 30' in time. - **#2 \$39.99 (July); #5 \$99.99; #7 \$149.99 (July); Assorted Specimens Individually Priced**

Acer x 'Cinnamon Flake' - Cinnamon Flake Hybrid Maple - Z5

A nearly unobtainable hybrid maple that combines the dapper parentage of *Acer griseum* (paperbark maple) with *A. maximowiczianum* (Nikko Maple) to create a vigorous, superbly ornamental small specimen tree. Plants develop a rounded canopy cloaked with trifoliolate rich green leaves that take on handsome scarlet and orange autumn tones. Brown and amber slightly exfoliating ornamental bark provides added appeal throughout the year. Plants are better garden performers than their parents showing stronger growth and better durability. 30'

Assorted Specimens Individually Priced

Acer x conspicuum - Hybrid Snake Bark Maple - Z5

A fine group of maples initially coined in 1994 to represent a collection of hybrids between *Acer davidii* and *A. pensylvanicum*. Most members develop into 20-30' specimens taking on either large shrub or small tree stature. Outstanding bark interest is a hallmark of the group with all showcasing attractive striated stems and waxy bloom. Stem color is most prominent on young stems to 3" in diameter and runs the range from scarlet to purple, orange and green. All prefer part shade exposure with even moisture yet reasonable drainage.

'Esk Flamingo' - Unquestionably one of the most electrifying snake bark maples that we've seen to date. 'Esk Flamingo' boasts spectacular three-lobed leaves prominently colored with bold splashes of flamingo pink and vivid white. The weeping plants have a lax framework of arching stems with reliable green and white striping during the growing season. In winter dress, the display continues with brilliant scarlet and white candy cane-like stem colors dominating. An excellent year round interest plant for the shade. - #3 \$79.99; #5 \$109.99 (July); #7 \$179.99 (July)

'Phoenix' - A show stopping maple forming a medium-sized shrub or small tree with glowing, white-striped, fire engine red winter twigs. One of the most striking plants in winter. #2 \$49.99 (July)

Acer x 'Purple Haze' - Purple Haze Hybrid Maple - Z4

A curious and unexpected hybrid maple that combines the immaculate pedigree of the paperbark maple (*Acer griseum*) with the vigor and landscape durability of sycamore maple (*A. pseudoplatanus*). The result is a strong growing, non-weedy small specimen tree boasting three-lobed green leaves backed with a burgundy infused reverse. In autumn, flawless scarlet autumn tones set the garden afire. Plants can be expected to reach 15' in height after a decade of effort and will certainly be valued for accent, flair and overall plant geekyness (not to be confused with gawkiness or gooyness). - #5 \$99.99; #7 \$149.99 (July); Assorted Specimens Individually Priced

Aesculus hippocastanum - Horsechestnut - Z3

A stately specimen tree widely used in European gardens where they can reach 100' or more in height. The dark green leaves are palmately compound adding a tropical appearance to the landscape. Terminal panicles composed of numerous white and yellow bi-colored flowers arise from the branches in mid to late May. Light brown, spiny capsules develop by mid summer and become a weapon of choice for dueling siblings when they begin to fall to the ground in autumn. Certainly a striking plant for larger properties!

'Laciniata' - A bizarre horsechestnut that has become one of the most asked about plant in our collection. The mutated leaves are literally cut into ribbon-like segments creating a fascinating and dramatic garden presence. Plants are slow growing but reported to reach significant proportions in time. - #2 \$49.99; #3 \$79.99 (July)

'Variegata' - An impressive and rare horsechestnut showcasing 10" leaves that are boldly splashed and streaked with irregular white variegation. We've trialed several different cultivars under this name and find that this clone is superior for both foliage color and garden performance. - #2 \$49.99 (July); #3 \$79.99; #5 \$109.99 (July); Assorted Specimens Individually Priced

'Wisselink' - An outstanding horsechestnut boasting unbelievable near white spring growth overlaid with pronounced green veins. The bold, tropical textured leaves are held on stout twigs and appear as if they lack sufficient chlorophyll to thrive. Though plants show best growth in partial shade they are capable of developing into fine, moderate-sized trees with age. #2 \$49.99; #3 \$79.99; #5 \$109.99 (July)

Aesculus pavia - Red Horsechestnut - Z4

A shrubby, small stature horsechestnut native to the southeastern United States. In late spring, plants exhibit startling red flowers

born in upright panicles held above the handsome, disease free, glossy, green foliage. One of the best horsechestnuts for use in small residential settings. 10-20' - #2 \$39.99; #3 \$59.99 (July); #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

Aesculus turbinata - Japanese Horsechestnut - Z5

A vigorous species valued for its ornamental character as well as its timber. Plants flaunt oversized, palmately lobed foliage that adds a stunning tropical look to the garden. Creamy white flower panicles stand proud above the greenery in late spring. Plants are best suited for large properties where the 60' specimens can be most appreciated.

'Marble Chip' - From friend Tim Brotzman, this thrilling variegated selection of Japanese horsechestnut aims to please those searching for bold colors and an exotic experience. Each 1', palm-shaped leaf is heavily marbled and mottled with creamy white against a deep green backdrop. The leaves are scorch resistant and are superb for adding color accent to the garden. Though quite strong growing, plants are expected to mature a bit smaller than their green leaf counterpart. - #2 \$49.99; #3 \$79.99; #5 \$109.99 (July)

Aesculus x carnea 'Aureomarginata'
Variegated Red Horsechestnut - Z5

A slow growing, fancy red horsechestnut showcasing bold compound leaves edged with a prominent golden-yellow margin. The leaves are smaller than typical *Aesculus x carnea* progeny and plants are expected to mature around 2/3 the size. Typical pale red flowers are present amongst the leaves in late May. Overall an excellent plant for adding tropical flair and visual impact to the garden. 20-25' - #2 \$49.99; #3 \$79.99 (July)

NEW ***Aesculus x mutabilis 'Induta'***

Induta Hybrid Horsechestnut - Z5

An uncommon yet phenomenally attractive horsechestnut derived from a hybrid between *Aesculus pavia* and *Aesculus sylvatica*. Though plants have been in cultivation since the early 1900's they still remain unjustly elusive in gardens. The compact plants are well suited for small properties as they mature 8-12' in height. High gloss, rich green leaves provide an excellent stage for the terminal flower panicles comprised of salmon-pink and apricot-orange blossoms. As with most *Aesculus* species best performance will occur in a sunny exposure with humus-rich soils and even moisture. - #3 \$79.99; #5 \$109.99 (July)

Aesculus x neglecta 'Erythroblastos'

Erythroblastos Horsechestnut - Z4

A moderately vigorous deciduous tree boasting the typical five-parted leaves of the species and developing an upright oval crown with age. In spring, plants add drama to the garden with a breathtaking display of flamingo pink, emerging leaves. Truly an unbelievable show that lasts for several weeks as the leaves gradually transition to pale green. Soon thereafter, a pleasant display of light yellow flowers held in upright racemes adds additional landscape appeal. - #2 \$49.99 (July); #3 \$79.99; #5 \$109.99; #7 \$149.99 (July)

Albizia julibrissin - Mimosa Tree - Z6b

A vase-shaped small tree or large shrub native to inner China as well as parts of Iran and Taiwan. The vigorous plants develop a broadspreading framework with delicate, deep green, fern-like leaves. In summer, bottlebrush-like blossoms in a range of colors from pale pink to red provide cheerful accent. Plants are extremely adaptable and have become weedy in some parts of their hardiness corridor. In the extreme heat of the south blight issues can be major problems though these problems are not as prevalent in the north. 20-30'

'NCAJ1' Chocolate Fountain™ PP 25813 - A purple foliage, weeping mimosa tree! Yes, you read that correctly. This exciting new introduction developed by the breeders at NC State combines the weeping framework of 'Ishii Weeping' with the premier, deep-burgundy, fern-like foliage of 'Summer Chocolate'! The strong growing plants quickly develop into talking points in the garden demanding attention in nearly any full sun location. As with the species, pink bottlebrush-like blooms add seasonal value during summer. - #2 \$49.99; #3 \$79.99; #5 \$129.99 (July); #7 \$179.99 (July)

'Summer Chocolate' PP 13822 - Truly one of the premier new plant introductions of recent time. 'Summer Chocolate' boasts soft-textured, fern-like leaves that emerge greenish-bronze in spring. As the season progresses the color becomes darker, maturing deep burgundy-black by August. Puff-like, pinkish-red blossoms contrast vividly with the foliage in late summer. Plants are very fast growing developing a broad, airy, vase-shaped silhouette in time. Like the species, 'Summer Chocolate' is both drought tolerant and adaptable to varied soil conditions. Excellent for use as a specimen in a sun-drenched exposure. - #3 \$79.99; #5 \$129.99; #7 \$179.99 (July)

Amelanchier canadensis - Shadblow - Z3 - **Native**
A native, small statured tree or multistemmed shrub. One of the earliest plants to flower in spring. Edible blue-black fruit are cherished by birds. Excellent fall color in shades of red, orange and yellow. 15-20' - #3 \$59.99; #5 \$89.99 (July)

Asimina triloba - Common Pawpaw - Z5 - **Native**
An unusual large shrub or small tree native to the southeastern and central United States. Plants spread by underground stems and if allowed can develop into sizeable stands. As the foliage emerges in spring, plants display unique 1" purple flowers which develop into 3-5" kidney-shaped fruit. The fruit is edible and enjoyable with a taste that is a bit like a banana or banana-mango blend. The fruit is a bit messy to eat fresh but is certainly worth experiencing. If fresh eating isn't your cup of tea, then maybe pawpaw gelato or pawpaw beer is more your style. Although plants are often capable of producing fruit on their own, production is generally dramatically increased by planting several clones in close proximity. In addition to fruit production plants have a storied history of use. Apparently, the inner bark was once used to make fish nets!

'Sunflower' - A self-fertile selection that requires only one plant to produce fruit. Plants always produce high yields and fruit are particularly large and sweet. - #2 \$44.99; #3 \$69.99 (July); #5 \$99.99 (July)

'Variegata' - A curious selection sporting green leaves delicately flecked and blotted with white variegation. The coloring is reserved but intriguing nonetheless. No doubt those who share our colored-leaf mania will have this one added to the top of the list. - #2 \$49.99 (July); #3 \$79.99 (July)

Betula nigra - River Birch - Z3 - **Native**
An excellent disease and insect resistant specimen tree that exhibits spectacular salmon-white exfoliating bark and yellow fall color. Plants are tolerant of both moist and dry soil conditions in any full sun location. Surely one of the most spectacular of the birches for all-around interest.

'Cully' Heritage® - A superior selection introduced by Earl Cully. Exhibits exceptional vigor, glossier leaves, and brilliant salmon-pink exfoliating bark. - #7 \$99.99; **Assorted Specimens Individually Priced**

'Little King' - An underutilized, compact selection that matures 10-15' in height. Typical exfoliating bark of the species and attractive yellow fall color add seasonal interest. An excellent choice for small gardens. - #5 \$89.99; #7 \$129.99 (July); **Assorted Specimens Individually Priced**

Broussonetia kazinoki **'Variegated'** - Golden Kozo - Z6
A flamboyant, highly colored selection of this uncommon Broussonetia species that has quickly grabbed our attention. The easy-peasy shrubs strut deep green leaves intricately stippled and spotted with abundant quantities of chartreuse and gold that can't help but add a touch of the tropics to the garden. Plants are easy to cultivate showing strong vigor coupled with tolerance to both drought and excessive summer heat. Though the genus has a reputation of being weedy this species tones things down with its sucker free, restrained nature. 12-15' - #7 \$99.99; **Assorted Specimens Individually Priced**

Caragana arborescens **'Walkerii'**
Cutleaf Weeping Siberian Pea Shrub - Z2
Why not bulk up your garden display with this uncommon shrubby tree. The dwarf, refined plants offer a graceful, weeping branch structure comprised of thin stems cloaked with rich green, finely dissected leaves. In early summer the silhouette is accented with bright yellow, pea-shaped blossoms. Plants are superbly cold hardy and tolerant of a full spectrum of soil conditions. Excellent in the rock garden, as a year round container subject or other garden space where attention is directed. - **Assorted Specimens Individually Priced**

Carpinus betulus - European Hornbeam - Z5
A prominent landscape tree that develops into a statuesque specimen in time. The species and its cultivars are a mainstay in European and American gardens where they are used for many landscape applications. They withstand heavy pruning and can be easily manicured into handsome screens and hedges.

'Columnaris Nana' - An unjustly rare selection of European hornbeam that's been floating around collections for years. In time, plants form incredible, dwarf, sculpted specimens that resemble fine bonsai creations.....just without all the pruning and primping. Plants are easily integrated into rock gardens or Japanese style plantings where they will slowly mature to 6' in height over many seasons. - #3 \$69.99; #5 \$99.99;

#7 \$149.99 (July); **Assorted Specimens Individually Priced**
'Fastigiata' - The classic columnar hornbeam used widely in European gardens. Forms a distinct, upright habit in youth becoming more open with age. - **Assorted Specimens Individually Priced**

Carpinus caroliniana
American Hornbeam - Z3 - **Native**
An underutilized small native tree or large shrub frequently encountered in woodlands and shaded stream banks in the region. The distinct, smooth, gray, fluted bark has a unique "muscle" appearance and is attractive throughout the year. Fresh green leaves are free from disease and turn shades of yellow, orange and red in autumn. An excellent choice for naturalizing and in areas where its subtle beauty can be appreciated. 25'
Assorted Specimens Individually Priced

'J.N. Upright' Firespire™ - A fine selection of this unassuming yet scarcely planted native tree from Mike Yanney at Wisconsin's Johnson's Nursery. As the name suggests, Firespire™ combines an upright habit with reliable orange-scarlet fall color. The durable plants perform in both sun and shade and should prove valuable as a handsome screening plant or in a tight space where narrow accent is required. - #2 \$39.99 (July); #3 \$59.99; #5 \$89.99; #7 \$129.99; **Assorted Specimens Individually Priced**

NEW ***Castanea sativa*** **'Albomarginata'**
Variegated European Chestnut - Z5
A plant that we've lusted over for decades and have finally acquired a few to share. 'Albomarginata' is a heavily variegated selection of this European native chestnut. Each 4-8" rich green

leaf offers high gloss color with a crisp, bold white edge. In late spring, pipe-cleaner-like, cream-yellow catkins are held in clusters amongst the leaves. By fall, crops of edible chestnuts have developed and are enclosed within a spiny casing. Once established plants are strong growing, assuming an impressive framework. Sadly this species is known to be susceptible to chestnut blight so those opting to cultivate it should do so with caution and awareness. 30' - #2 \$59.99

***Catalpa bignonioides* - Southern Catalpa - Z5**

A vigorous deciduous tree native to the southeastern United States. Showcases sizeable 12" panicles of white and purple foxglove-like flowers in early summer. Broad, tropical looking foliage adds unique texture and appeal. Plants are easy to grow following happily in sunny exposures with all but wet soil conditions. 60'

'Nana' - A rarely offered and very old selection of southern catalpa introduced in France in the mid 1800's. We find the congested branching and rounded framework of this dense form to be quite an individual in the crowd of similarly proportioned shrubbery. Leaves are a bit smaller than the species yet still large enough to add bold, contrasting texture to the garden. 6' x 6' #7 \$99.99; Assorted Specimens Individually Priced

***Cercidiphyllum japonicum* - Katsura - Z4**

A stately, fast growing, specimen tree that matures 40-60' in height. The unique, heart-shaped leaves often emerge pinkish-red in spring and turn shades of orange and yellow in fall. After the leaves change color and have fallen from plants they emit a unique "cotton candy" fragrance. Plants prefer even moisture in sun or part shade.

NEW 'Dawes Ascension' - A distinctive, new katsura selection from the folks at The Dawes Arboretum. Strong growing plants develop a decidedly upright, slender-columnar framework in youth, becoming a bit broader in maturity. Plants are satisfying to grow, reaching 40-50' in height at maturity with a spread only half as wide. As with the straight species handsome blue-green leaves coupled with yellow-apricot autumn colors add season long garden impact. - #3 \$59.99; #7 \$99.99 (July)

'Heronswood Globe' - A compact selection that was discovered and introduced by Heronswood Nursery. Typical heart-shaped leaves emerge burgundy in spring and transform to shades of pink and yellow in fall. Plants are well suited for smaller gardens as they maintain a smaller habit, maturing 20' tall. #3 \$59.99; #7 \$99.99; Assorted Specimens Individually Priced

'HS11' Claim Jumper™ - While on a recent acquisition trip to the Pacific Northwest I encountered an incredible diversity of promising new plants. As you might expect, these new treasures were promptly obtained and integrated into our test gardens. Among the bounty was the Claim Jumper™ katsura, a fine tree that catches the eye with luminous leaves that emerge with rose infusion before turning golden yellow. The solid plants maintain this leaf color throughout the gardening season and display strong growth and an upright habit in youth. Plants appear to develop with the rate and vigor of the straight species. - #2 \$39.99; #3 \$59.99; #7 \$99.99; Assorted Specimens Individually Priced

'Rotfuchs' - A recent introduction from Europe. New growth emerges dark bronze-maroon in spring. The coloration is retained for several weeks until it slowly fades to bluish-green by mid-summer. - #3 \$59.99 (July); #7 \$99.99; Assorted Specimens Individually Priced

'Tidal Wave' - An exceptionally vigorous, weeping katsura selection introduced by Bill Barnes of Lorax Farms. The unique plants display a strong weeping habit and excellent blue-green leaf coloration throughout the growing season. - #3 \$59.99 (July); #7 \$99.99; Assorted Specimens Individually Priced

Cercis canadensis* - Eastern Redbud - Z5 - **Native*

A wonderful, small-stature tree native to the eastern and midwestern United States. Plants develop rosy-pink, pea-like

flowers along the branches in early spring before the leaves fully emerge. Makes an excellent choice for part shade in moist but reasonably drained soil. 25'

'Alley Cat' - A visually stimulating recent selection that is sure to enliven the garden with its shocking white and green marbled foliage. Plants are reported to offer superior variegation to other similarly marked redbuds as well as better general garden performance with strong growth and little impact from heat and drought stress. Like the species, an abundance of lavender blossoms welcome spring before the leaves emerge. Discovered as a chance seedling in the "back alley" by plantsman Allen Bush. #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

'Appalachian Red' - 'Appalachian Red' is sure to please those that long for vibrant, exciting colors. In spring, this beauty sets things on fire with intense red flowers that persist for three weeks. Strong growth and familiar heart-shaped leaves add value. - Assorted Specimens Individually Priced

'Covey' PP 10328 - A graceful weeping selection from noted plantsman Tim Brotzman. Same charming flower display as the species. Plants need to be staked in order to gain height. #3 \$59.99 (July); Assorted Specimens Individually Priced

'Forest Pansy' - A beautiful selection with rich, purple-burgundy foliage and an abundance of dark pink flowers. The foliage coloration holds well in our region making a breathtaking display in the garden. A must for color and contrast! #3 \$59.99; #5 \$79.99; #7 \$109.99; Assorted Specimens Individually Priced

'JNJ' The Rising Sun™ PP 21451 - A fine cultivar of eastern redbud showcasing vivid apricot-orange new growth that gradually transitions through shades of golden-yellow and chartreuse before maturing to pale green. Rose-pink, pea-shaped flowers decorate the bare branches in early spring. Plants are strong growers demonstrating some tolerance of drought conditions. 12-15' - #3 \$39.99; #5 \$59.99 (July); #7 \$109.99

'Little Woody' PP 15854 - A cool new selection that is quite a bit different than your run-of-the-mill redbud. Plants assume a compact habit of thick, chubby branches that dress themselves with tightly spaced, crinkled and curled leaves. The foliage has an excellent blue-green cast and remains attractive throughout the season. Flowers retain the classic color of the species. 8-10' - #3 \$59.99; #5 \$79.99; #7 \$109.99 (July); Assorted Specimens Individually Priced

'NCCC1' Carolina Sweetheart™ PPAF - Yet another breakthrough redbud introduction from the folks at NC State in cooperation with the North Carolina Nurseryman's Association. I guess North Carolina has a thing for Cercis! Carolina Sweetheart™ stands out in the crowd with lavish burgundy-purple spring growth that evolves to maroon leaves with irregular pink margins by late spring. As the foliage color continues to evolve it eventually settles on green-tinged purple with varied white margins. Classic lavender purple flowers add familiar seasonal value before the foliage takes charge. - #2 \$44.99; #3 \$69.99; #5 \$89.99 (July); #7 \$129.99; Assorted Specimens Individually Priced

'Pink Pom Poms' PPAF - From NC State's redbud whisperer Denny Werner comes this new and exceptional redbud with fully double, reddish-pink flowers. The heavily petaled blossoms bear a resemblance to petite roses and are displayed in great abundance each spring. This rare breed develops into a full-sized specimen and is derived from strong parentage that adds tolerance to heat and drought while maintaining high gloss, pest-free foliage and strong growth. - #2 \$39.99; #3 \$59.99; #5 \$79.99; #7 \$109.99; Assorted Specimens Individually Priced

'Ruby Falls' PP 22097 - The long anticipated and astonishing weeping purple redbud! 'Ruby Falls' combines the best velvet-purple foliage of 'Forest Pansy' with the graceful, arching branching of 'Covey'. This, combined with the pea-like, rose-purple flowers of the species, makes for one of the most show-stopping specimens imaginable. Excellent for year round interest and

drama. Get yours early as supplies are limited. Caution should be exercised when cultivating this selection in the north as plants may be a bit less cold hardy than other selections. - #2 \$44.99; #3 \$69.99; #5 \$89.99; #7 \$129.99; **Assorted Specimens Individually Priced**

'Vanilla Twist' PP 22744 - Yet again we are amazed at the diversity of redbuds and the astounding rate the world's talented breeders continue to evolve this valuable group. This time we are blown away with 'Vanilla Twist', a strongly weeping selection with unique white blossoms and soft green foliage. The result of a hybrid between 'Covey' and 'Royal White'. - #5 \$89.99 (July); #7 \$129.99 (July); **Assorted Specimens Individually Priced**

Cercis chinensis - Chinese Redbud - Z6

A deciduous, upright, multi-stemmed shrub reaching 10-12' tall at maturity. Dark purple, pea-shaped flowers appear up and down the stems in spring, prior to leaf emergence and 1-2 weeks ahead of our native *C. canadensis*. Glossy, heart-shaped leaves provide additional appeal throughout the growing season. Plants are easily transplanted and are adaptable to a variety of landscape uses.

'Don Egolf' - A highly regarded selection of Chinese redbud introduced by the National Arboretum. The compact plants are literally covered from head to toe with a dramatic display of rose-lilac flowers in spring. Sturdy dark green leaves and good disease resistance add value. - #2 \$39.99; #3 \$59.99 (July); **Assorted Specimens Individually Priced**

NEW 'Kay's Early Hope' - A 2009 introduction from the JC Raulston Arboretum. Plants offer a splendid, long lasting show of pink-lavender flowers that appear as early as any redbud in our collections and last deep into spring. The low maintenance plants are easy to cultivate requiring little maintenance. Named for NC State's basketball coach, Kay Yow. - #3 \$59.99 (July)

Chionanthus retusus - Chinese Fringetree - Z6

A wonderful, large shrub or small tree. Develops beautiful, fleecy, snow-white flowers in May and June followed by abundant crops of long, blue-black fruits on female plants. The gray-brown peeling bark and lustrous dark green leaves add additional ornamental appeal. 15-20' - **Assorted Specimens Individually Priced**

'Arnold's Pride' - An amazing selection from the Arnold Arboretum that showcases an abundance of fragrant white flowers and blue fruit. Plants are vigorous growers forming a central leader and rounded crown in time. The original is still on the grounds of the Arnold Arboretum and is certainly one of the finest specimens of this species in the country! - #7 \$109.99; **Assorted Specimens Individually Priced**

'Tokyo Tower' - An exciting new, decidedly columnar selection of Chinese fringetree that we recently acquired. Our young plants appear to be quite upright but admittedly we haven't seen large plants to confirm the true habit. If the reports are true this selection could prove to be quite useful in tight places where vertical accent is required. - #2 \$39.99; #3 \$59.99; #5 \$89.99; **Assorted Specimens Individually Priced**

Cladrastis kentukea - American Yellowwood - Z4

A fantastic, medium to large deciduous tree native to the southeastern and midwestern United States. Plants showcase an abundance of white, pea-like flowers born in drooping panicles at branch end. The overall display can be fantastic and is reminiscent of a plant dripping with wet snow. Slate-gray bark and golden-yellow fall color provide added interest when flowers are not present. The common name is derived from the yellow interior wood coloration. A first rate tree for medium-sized properties.

'Perkins Pink' - An exciting selection of the American yellowwood developing pale-pink flowers on long, drooping panicles in spring. The original plant was discovered on the grounds of the Perkins Institute for the Blind, Watertown, MA and was propagated and distributed by the Arnold Arboretum. #3 \$59.99 #5 \$79.99 (July)

Cornus alternifolia - Pagoda Dogwood - Z3 - **Native**

A top notch native tree frequently overlooked for landscape consideration. Offers a wonderful horizontal branching pattern that works great to break up vertical elements in the landscape. Plants can have excellent flower, fruit and fall color impact. Grows best in moist, acid, well-drained soil in part shade. Excellent for native plantings! 12-18' - #2 \$39.99; #3 \$59.99 (July); #5 \$89.99 (July); **Assorted Specimens Individually Priced**

'W. Stackman' PP 11287 - An exciting and choice selection whose medium green leaves are dramatically edged with an irregular bright golden-yellow margin. When combined with the horizontal branching pattern the effect is dazzling! Plants are exceptionally vigorous and appear to be quite easy to grow. Ultimate size is still unknown however we suspect they will mature around 15-20' in height. - #2 \$49.99 (July)

Cornus controversa - Giant Pagoda Dogwood - Z5

The Asian counterpart to our native *C. alternifolia* that is similar in all aspects, just larger and somewhat tougher. Well grown plants develop into impressive landscape plants with their tiered branch pattern and showy, flat clusters of creamy-white flowers. 35-40'

'Janine' - An exciting introduction that offers glowing, gold-edged foliage with bright green centers. Plants are very vigorous and quickly make outstanding specimens! Rare and sure to be popular among enthusiasts! - #3 \$79.99; #5 \$99.99 (July); #7 \$129.99

'Variegata' - One of the finest variegated plants available. Displays stunning, white-splashed and margined foliage on a prominent, horizontally branched tree. Plants are vigorous growers once established. People literally can't walk by mature specimens without staring in awe! Always in high demand and rarely available. - #3 \$99.99; #5 \$129.99 (July)

Cornus florida - Flowering Dogwood - Z5 - **Native**

One of the showiest small deciduous trees native to the eastern North American woodlands. Develops a striking display of flowers in spring. Each flower head is surrounded by four showy, petal-like, white bracts which remain effective for several weeks. Flowers develop into clusters of bright red berries that are cherished by birds. Fall color can develop into radiant shades of scarlet and purple. 15-20'

'Appalachian Spring' - A University of Tennessee introduction selected for its superior resistance to dogwood anthracnose. In addition, plants showcase an abundance of moderate-sized white flowers. - #2 \$39.99; #3 \$59.99; #5 \$89.99; #7 \$109.99 (July); **Assorted Specimens Individually Priced**

'Autumn Gold' - A Don Shadow selection developed and introduced for its illuminating gold accented twigs and buttery-yellow autumn tones which combine brilliantly with the bountiful crops of red fruit. In May, plants flirt with gardeners with their broad white-bracted flowers. Promising reports suggest that this selection combines the above qualities with disease resistance that plague many selections of the species. - #2 \$44.99; #3 \$69.99; #5 \$99.99 (July)

'Comco No. 1' Cherokee Brave® - A classic, dark pink to red flowered form of our native dogwood. Plants are excellent garden performers and highly resistant to powdery mildew and dogwood anthracnose. - #2 \$39.99; #3 \$59.99; #5 \$89.99 (July); #7 \$109.99; **Assorted Specimens Individually Priced**

'Eternal' PP 13069 - A vigorous, fully double selection of flowering dogwood boasting ivory-white flowers each comprised of as many as 20 bracts. Plants are vigorous and show good resistance to powdery mildew. The best double native dogwood available to date! - #2 \$39.99; #3 \$59.99 (July)

'Fircomz' Firebird™ - Just about everyone that saw this plant tucked away in our plant playground this past year had

a classic, plant induced, stop and drool moment. Once the gawking stopped the "what's that" questions followed. We obliged with a proper introduction to *Cornus florida* Firebird™ and went on to explain that this striking small tree was discovered as a variegated branch sport of Cherokee Brave®. As one might expect, plants display rich pink blossoms in spring prior to leaf emergence. Shortly after flowering the green leaves emerge from winter's rest with creamy-white margins that are heavily infused with red. The foliage remains crisp and colorful through the growing season before picking up scarlet tones in autumn. Plants are slower growing than the species but show good resistance to diseases.

#2 \$44.99; #3 \$69.99 (July)

NEW 'Jean's Appalachian Snow' PP 13099 - A white flowering, powdery mildew resistant selection of our native dogwood from the University of Tennessee. The original plant was identified in 1994 from a field of more than 1,000,000 seedlings. Floral bracts are larger than average, appearing prior to leaf emergence in April. The strong growing plants have glossy rich green foliage during the growing season capped off by stylish red tones in fall. Expect plants to reach 20-30' high and wide when mature. - #5 \$89.99; #7 \$109.99 (July)

'Karen's Appalachian Blush' PP 13165

A fine, disease-resistant cultivar of flowering dogwood originally discovered as a chance seedling in Decherd, TN. Plants assume the typical habit of the species with white floral bracts blushed with pink along the margin. - #2 \$39.99; #3 \$59.99; #5 \$89.99 (July); #7 \$109.99 (July); Assorted Specimens Individually Priced

var. *pringlei* - A unique and fascinating variant of flowering dogwood with lineage traced to Mexico. Plants assume a typical flowering dogwood form yet offer flowers with white bracts that are fused at the tips. The overall show is somewhat reminiscent of a Chinese lantern. Call it unique, bizarre, or enchanting we like it and find that it brings a refreshing new dimension to the world of dogwoods. Plants appear to be strong growers in the garden yet are less cold hardy than is typical for the straight species. - #2 \$44.99; #3 \$69.99 (July)

Cornus kousa - Kousa Dogwood - Z5

An elegant Asian relative to our native *C. florida*. Develops plentiful flowers in June and July, which are surrounded by showy white or pink floral bracts. The floral display on many selections can be effective for a month or more. Fantastic crops of showy red fruit dangle from the stems in autumn. The best specimens also have eye-catching fiery red, scarlet and crimson fall color. Truly among the finest of all specimen plants. We are pleased to offer an ever expanding selection of choice cultivars. 20-30'

'Akatsuki' - A brilliant sport of 'Satomi' recently introduced to the US nursery industry from Japan. Plants showcase green centered leaves boldly edged with creamy-white variegation. In June, pale pink to white flowers adorn the upright branch work. Plants are slower growing than the species reaching perhaps 12' tall and wide when mature. Best performance will occur in part shade with an even moisture regime. - #2 \$44.99; #3 \$69.99; #5 \$99.99 (July); Assorted Specimens Individually Priced

'Beni Fugi' - An attractive and tough to come by cultivar that struts a generous display of deep reddish-pink flowers. Plants are slower growing and smaller stature than most kousa selections making it an excellent choice for smaller gardens and tight spaces. A personal favorite! 12-15' - #2 \$39.99; #3 \$59.99; #5 \$89.99; #7 \$109.99 (July); Assorted Specimens Individually Priced

NEW 'China Kurl' - Take what you know about kousa dogwoods and throw it out the window. This choice, fun dwarf selection offers up minute, deep green, heavily twisted leaves along narrow stems. The dense plants have an irregular framework adding about 3-6" of growth annually. Does it flower? Can't say yet. Our young plants haven't to date but only time will tell. - #2 \$59.99; #3 \$89.99 (July)

'Elizabeth Lustgarten' - A graceful, pendulous selection offering snow-white bracted flowers and brilliant red-orange-yellow fall color. One of the most asked about plants in our display gardens. Matures 12-15' in height over a 30 year time period. - #5 \$99.99; #7 \$129.99; Assorted Specimens Individually Priced

'Gold Cup' - A recent selection with dark green foliage cleverly brushed with a prominent golden yellow central streak. Plants are quite similar to the classic cultivar 'Gold Star' but are reported to be more vigorous and maintain an upright stature. #2 \$39.99 (July)

'Kristin Lipka's Variegated Weeper' PP 13384 An exciting, variegated, weeping kousa dogwood from plant guru Bob Lipka. Bob found the plant as a sport on a weeping kousa dogwood in his nursery and named it after his daughter. Plants are moderate growers developing a graceful, arching framework in time. Each light-green leaf is illuminated with a pronounced, creamy-white margin that turns shades of red and pink in autumn. The foliage is excellent in contrast with the pure white, bracted blossoms. - #2 \$44.99 (July); #3 \$69.99 (July); Assorted Specimens Individually Priced

'Limon Ripple' - A striking selection that originated as a branch sport on a seedling tree. Plants are moderate growers presenting narrow green leaves with prominent, glowing gold margins and prolific white bracts. One of our favorite gold variegated dogwoods. - #3 \$59.99; #5 \$89.99; #7 \$129.99 (July); Assorted Specimens Individually Priced

'MADI-11' Mandarin Jewel® PPAF - A 2014 introduction from Tim Brotzman offering the classic garden performance, flowering capacity and framework of the species. In September, Mandarin Jewel® stands apart with distinguishing cherry-sized fruit that begin yellow and evolve to pumpkin-orange when ripe. Like the species, the fruit is edible and flavorful. #5 \$89.99; #7 \$109.99 (July)

'Madison' PP 16129 - A fast growing and ornamentally superior selection of kousa dogwood selected from open pollinated seedlings of *Cornus kousa* 'Milky Way' by plantsman Tim Brotzman. As you might imagine from the parentage, plants develop a dramatic floral display with masses of large, overlapping white bracted flowers that frequently persist into summer. The thick, deep green foliage sets itself apart from other dogwoods by turning a rainbow of intense red, yellow and orange tones in August. As autumn approaches the coloration intensifies adding a breathtaking garden presence that is distinct among the dogwoods. 15' - #3 \$59.99; #5 \$89.99; #7 \$109.99 (July)

'Pam's Mountain Bouquet' PP 25575 - A very distinct and unique full-sized cultivar of kousa dogwood selected by the University of Tennessee. The floriferous plants stand apart with a display that includes a large percentage of fused, petal-like white bracts rather than the standard show of four distinct structures. Though a challenge to describe, the overall display is a bit like one large square-shaped flower. Still hard to envision? Take a few minutes and search the web for images. - #7 \$109.99; Assorted Specimens Individually Priced

'Primrose Cloak' - A new and very rare kousa dogwood that welcomes spring with vibrant, bright yellow new growth offset with a pink blush to the emerging twigs. Though our young plants are too young to flower we're expecting the classic white-bracted blooms of the species. - #2 \$39.99; #3 \$59.99; #5 \$89.99 (July); #7 \$129.99

'Rutpink' Scarlet Fire™ PP 28311 - All reports indicate that 'Rutpink' has the potential to become the new standard for pink kousa dogwoods. The result of Dr. Tom Molnar's work at Rutgers University offers saturated pink bracts that are borne with great abundance and maintain intense color through warm weather. Familiar crops of pendulous red fruit and red-cast autumn tones provide added seasonal value for gardeners to enjoy. 20-25' - #3 \$59.99; #5 \$89.99; #7 \$129.99 (July)

'Satomi' - A vigorous, soft-pink bracted selection that has become very popular. Flower color is often variable from year to year and in different geographical areas. Genetic tests have shown it to be the same clone as 'Rosabella' and 'Heart Throb'. #3 \$59.99; #5 \$89.99; #7 \$109.99; Assorted Specimens Individually Priced

'Summer Fun' - An irresistible white variegated kousa that we like a lot. Each leaf emerges in spring with a stunning pinkish-white margin. Overall, plants have performed admirably in full sun and seem to be similar to 'Wolfeyes'. #3 \$59.99; #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

'Summer Gold' PP 22765 - A fantastic new dogwood from noted plant enthusiast Crispin Silva. 'Summer Gold' treats us with brilliant gold-edged foliage that remains attractive all season. Plants are vigorous growers and resist leaf roll in full sun conditions. Certainly a promising plant and among the best of the gold variegated dogwoods for general landscape use. - #2 \$39.99; #3 \$59.99 (July); #5 \$89.99 (July); #6 \$109.99; #7 \$129.99 (July); Assorted Specimens Individually Priced

'Wolfeyes' - A dramatic, white-edged form that is vigorous and less susceptible to burning than other variegated selections. Phenomenal, bi-colored, pink and scarlet fall color is among the best of the kousa dogwood forms. Equally as interesting are the unique, undulating leaf margins that develop on plants grown in full sun. - Assorted Specimens Individually Priced

Cornus mas - Corneliancherry Dogwood - Z4
An underutilized large shrub or small deciduous tree suitable for use in a variety of landscape situations. Plants awaken in early spring with an impressive display of small yellow flowers on bare branches. Generous amounts of bright red, thumb-sized, edible fruit and a mosaic of gray, cream and brown bark provide added seasonal interest. 15-20'

'Spring Glow' - A show stopping cultivar that is smothered with hundreds of bright yellow flowers in spring. Leathery, dark green leaves adorn the plant throughout the growing season. An excellent and underutilized introduction from the JC Raulston Arboretum. Some literature list this selection as a cultivar of *Cornus officinalis*. - #2 \$39.99; #3 \$59.99; #5 \$89.99 (July)

Cornus officinalis - Japanese Cornel Dogwood - Z4
A fine deciduous shrub or small specimen tree native to Japan, China and Korea and closely allied to the corneliancherry dogwood (*Cornus mas*). Plants reach 15-25' in height and breadth with an open branch structure when fully developed. In late winter, stems are cloaked with prolific bright yellow blossoms that emerge about a week ahead of *C. mas*. The foliage is rich green and quite glossy, turning to variable shades of yellow, orange and scarlet in autumn. Plants are easy to cultivate providing excellent early season garden interest.

'Kintoki' - An outstanding selection showing a superior display of vibrant yellow flowers in March and April followed by large crops of scarlet, thumb-sized, edible fruit in late summer. Foliage is deep green and high gloss during the growing season and transitions to bright red in autumn. Attractive gray, tan and orange exfoliating bark provides added appeal during dormant months. Plants are valuable year round interest plants in the garden and make a fine choice for the cut branch industry. Awarded a gold medal by the Pennsylvania Horticulture Society in 2012. - #3 \$59.99; #5 \$89.99

Cornus x elwinortonii - Hybrid Dogwood - Z6
A group of hybrid dogwoods resulting from crosses that incorporate varied genetics from *Cornus kousa* and the western US native *C. nuttallii*. The plants were initially developed by prominent dogwood breeder Dr. Elwin R. Orton and released by Rutgers University. All are vigorous growers, show exceptional disease resistance and are highly floriferous. Plants have the

capacity to grow larger than *Cornus kousa* and have some capacity to develop fruit though they generally lack viable seeds and frequently fail to reach maturity.

'F70: R11, P13' Rosy Teacups® PP 26211 - This exciting hybrid is sure to make a splash. The strong growing plants develop a well-branched spherical canopy to 25' in height and breadth. In spring, abundant rosy-pink blossoms demonstrate the incredible flower power this hybrid possesses. Each 3" blossom is saturated in color and the overall display can persist for as long as a month in favorable conditions. The pest free foliage is high-gloss, deep-green transforming to quality orange and scarlet in fall. Unlike most of the other hybrid dogwoods, Rosy Teacups® ends the season with a classy display of orange-red cherry-sized fruit. - #3 \$59.99; #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

'KN-30-8' Venus® PP 16309 - An amazingly vigorous selection with a dense branch structure that develops into a broad-rounded canopy in time. Plants flaunt an abundance of flower clusters in June which are set off by four massive white floral bracts. This display is complemented by lustrous dark green foliage that remains free from powdery mildew and anthracnose. #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

Cornus x rutgersensis - Hybrid Dogwood - Z5
A group of hybrid dogwoods resulting from crosses that incorporate varied genetics from *Cornus florida* and *C. kousa*. Plants were initially developed by Dr. Elwin R. Orton and released by Rutgers University. All are vigorous growers, show exceptional disease resistance and are highly floriferous.

'KV10-105v1' Variegated Stellar Pink® PP 24952 - An exhilarating addition to the assortment of hybrid dogwoods now available. 'Variegated Stellar Pink' flaunts dazzling variegated leaves that blend an irregular white margin with a marbled green interior. Pink-bracted flowers can be expected to develop in spring and vivid multicolored leaves of scarlet, pink and orange complete the story in autumn. Plants are expected to be slower growing than the standard green leaf hybrids and will benefit from a bit of shelter from the hottest hours of daylight. #3 \$69.99; #5 \$99.99; #7 \$149.99 (July)

'Michael Steinhardt' Celestial Shadow™
A sport of *Cornus x rutgersensis* Celestial™ discovered by Don Shadow. In spring and early summer plants showcase medium green leaves each boldly edged golden yellow. As the season progresses the color gradually accumulates increasing amounts of green. At the culmination of the growing season stunning pink and burgundy tones prevail in autumn. One of the finest variegated dogwoods introduced to date! - #5 \$89.99; #7 \$129.99

Corylus avellana - European Filbert - Z5
A large deciduous shrub that develops into a dense, upright, branched plant. Plants are grown commercially throughout Europe for their flavorful nuts. The straight species is rarely used as an ornamental. **NEW** **'Burgundy Lace' PP 28216** - A 2017 introduction from Oregon State University that is sure to draw attention. The alluring leaves of 'Burgundy Lace' are a sultry wine-red color, each accented by rough textured serrations along the margin. Specimens assume an eye-catching framework of ascending branches of moderate vigor to 30' in height. Plants are easily cultivated showing strong resistance to eastern filbert blight. Sure to impress in a key garden position. - #2 \$39.99 (July)

Corylus fargesii - Farges Hazelnut - Z5
A rare Chinese hazelnut that we fell in love with the first time we saw it at Philadelphia's Morris Arboretum. Plants develop into wonderful small specimen trees with a formal, pyramidal habit. The simple leaves are rich green and free from major pest and disease issues. In winter the bark commands attention with its bronze and amber exfoliations that are reminiscent of the best forms of *Acer*

triflorum and Acer griseum. 20-30' - #2 \$39.99 (July)

***Corylus* x 'Red Dragon' PP 20694**

Red Dragon Contorted Filbert - Z5

An exciting contorted purple leaf hazelnut from the talented plant breeders at Oregon State University. Plants combine the architecturally pleasing, twisty stems of 'Red Majestic' with improved foliage coloration throughout the growing season and better tolerance to the soil born blights that can cause problems with other selections. - #5 \$89.99; #7 \$149.99; **Assorted Specimens Individually Priced**

***Cotinus obovatus* - Smoke Tree - Z5**

An underutilized small specimen tree native to restricted regions in Tennessee, Alabama and Texas. Plants are perhaps best known for their impressive fall foliage display which ranges from red-purple to yellow-orange. Airy, smoke-like flower panicles and exceptional, blue-green foliage during spring and summer provide added seasonal interest. Plants grow best in bright areas with decent soil drainage and show adaptability to soils with high pH. 20-30' - #2 \$39.99 (July); #5 \$89.99; #7 \$109.99; **Assorted Specimens Individually Priced**

***Davidia involucrata* - Dove Tree - Z6**

The famed dove tree, which the great plant explorer E.H. Wilson referred to as "the most interesting and beautiful of all trees of the north temperate flora". Plants offer unique, bracted flowers in early spring that resemble white doves hovering among the bright green foliage. In maturity, specimens develop a broad pyramidal habit and mature 30' in height.

NEW 'Lady Sunshine' - A jaw dropping dove tree that showcases amazing leaves edged with a broad, creamy white margin. Incredibly bold and attractive throughout the growing season. Plants are notably slower growing than other dove tree selections and will benefit from a shaded location. Those who are able to grow this fine species will most certainly cherish the opportunity to add this form to the collection. - #3 \$99.99; #5 \$149.99 (July); #6 \$179.99; #7 \$249.99; **Assorted Specimens Individually Priced**

'Sonoma' - A superior dove tree introduced by California's Sonoma Nursery for its propensity to blossom from an early age with an abundance of oversized satin-white bracted flowers. Unlike some plants, 'Sonoma' lives up to its billing as we have seen 3' tall plants produce a handful of flowers and larger, five year old youngsters with abundant handkerchief-like flowers perched along the branches. One can only imagine what a mature specimen might add to the garden. - #2 \$49.99; #3 \$79.99 (July); #7 \$179.99; **Assorted Specimens Individually Priced**

var. vilmoriana - A northern variant of dove tree that is much more commonly cultivated than the straight species. Plants differ in that they have slightly fuzzy leaves and young stems. More importantly the plants also show greater cold hardiness with many growers having success in zone 5 gardens. #5 \$89.99; #7 \$129.99 (July)

***Diospyros lotus* - Date Plum - Z6**

A fantastic species that is unjustly rare in gardens but certainly prime for both ornamental and edible appreciation. The strong growing trees have a dense, formal framework when young but will become more open with age. Stems support high gloss, deep green leaves that have remained fresh and colorful in our experience. A bountiful harvest of bright orange, 1/2" fruit grace plants in late summer and autumn. The fruit is edible and reported to have a flavor of a plum that has mingled with a date. Fresh eating, juicing and drying are all noted applications though patience is required, as frost is necessary to bring out the sweetness of the natural sugars. Reports of 100' specimens in the wild exist though we feel 30-40' is more realistic in managed landscapes. - #5 \$79.99; #7 \$99.99 (July)

Diospyros virginiana* - American Persimmon - Z5 - **Native*

A small to medium-sized deciduous tree native throughout the eastern and southeastern United States. Plants develop an oval canopy of irregular branching and cloak themselves with glossy, rich green, oblong leaves. The charcoal-gray bark is quite distinctive and ornamental, breaking up into tight rectangular blocks that resembles alligator hide. In autumn, female plants produce unique, 1-2" orange, edible fruits that become sweet and flavorful after several hard frosts.

'Early Golden' - A selection of this underutilized tree that hails from Illinois. 'Early Golden' showcases fine crops of golden-yellow fruit that begin to reach maturity in September. The thin skinned fruit are larger than average, flavorful and sweet. #5 \$89.99; #7 \$109.99 (July)

'JN5' Magic Fountain™ PP 25689 - Forget what you thought you knew about common persimmons and open your eyes to Magic Fountain™. This unique cultivar, selected by Ray Jackson of Tennessee will blend the lines between edible and ornamental further than before. The strong growing plants sport a graceful weeping framework coupled with crops of 1" golden-yellow fruits that ripen in autumn. Rich green leaves are present throughout the growing season on plants that can be expected to reach 10-15' tall and 5-7' wide. - #5 \$99.99; #7 \$129.99 (July)

'Meader' - 'Meader' is a "classic" (if there is such a thing) selection of common persimmon that was introduced by the acclaimed fruit breeder Elwyn Meader in the 1970s. This clone is self-fruitful and will produce crops of large, golden-yellow fruit in autumn. Fruit are flavorful though are best eaten after the sugars are enhanced by several frosty nights. - #5 \$89.99; #7 \$109.99 (July)

***Euonymus grandiflorus* - Spindletree - Z6**

An extraordinary and unjustly rare Asian inhabitant of the spindletree family that we first became acquainted with while strolling the grounds of the New York Botanical Garden one crisp October afternoon. A fine specimen of this small tree species was an outstanding glossy-burgundy autumn dress at the time and an instant friendship was formed. During the growing season, the 20' tree's wide spreading branches boast sleek green leaves that are lustrous and free from disease. Curious, four-petaled beige blossoms gain attention in spring as does autumn's crop of pendulous pinkish-orange fruit. In the garden, plants are as durable as other members of the genus demonstrating tolerance to varied soil and light conditions. While plants will never become mainstream we find them exceptional and worthy of consideration by those of you with an adventurous style. - #5 \$79.99; #7 \$99.99; **Assorted Specimens Individually Priced**

***Fagus sylvatica* - European Beech - Z5**

Undoubtedly one of the most dramatic large specimen trees available to the garden enthusiast. Plants form a statuesque, rounded silhouette of glossy green, oval leaves that turn to shades of rich, golden-copper in fall. Makes a coveted specimen or versatile hedge in nearly any well-drained, sunny location. Many excellent cultivars have been selected and we are happy to be able to offer some of the best. 60'

'Ansoergei' - A choice and unjustly rare beech with European lineage that dates back more than 100 years. The ornate, semi-dwarf specimens boast elongated, radically narrow, deep purple leaves on an irregular open framework. Plants convey an amazing textural presence in the garden blending superbly in mixed plantings, large rock gardens and Japanese themed displays. 10-15' - #2 \$49.99; #3 \$69.99; #6 \$129.99; #7 \$179.99 (July); **Assorted Specimens Individually Priced**

'Asplenifolia' - An outstanding form of European beech that develops into a majestic, elegant specimen with time. Each fresh green leaf is delicately dissected into numerous deeply cut lobes that add a feathery texture matched by few peers. Those

that have visited the famed mansions of Newport Rhode Island have likely seen this plant grown to its full potential and witnessed its majestic presence. - #2 \$39.99; #3 \$59.99; #5 \$99.99 (July)

'Aurea Pendula' - The golden weeping European beech is certainly one of our favorite cultivars of this remarkable group. Plants are medium growers developing a graceful narrow framework of cascading branches with age. Stems are cloaked with bright golden-yellow leaves in spring that remain colorful throughout the year with proper siting. Optimum growth occurs in rich, evenly moist soil with shade from hot afternoon sun. Well grown specimens are truly amazing pieces of living garden sculpture. - #2 \$49.99; #3 \$79.99 (July); Assorted Specimens Individually Priced

'Dawyck Gold' - A tall, very columnar form of European beech with a bright golden spring flush that transitions to fresh lime-green as the season progresses. A brilliant structural form for a confined space or where a fastigate plant is required. - #5 \$89.99

'Dawyck Purple' - A fastigate beech with deep purple-black foliage. Plants form a tall, narrow tree in time and show best coloration in full sun locations. - #3 \$59.99; #5 \$89.99

'Franken' - A dramatic European beech cultivar selected from a lot of seedlings of *Fagus sylvatica* 'Marmorata'. The slow growing plants showcase dramatic white mottled and speckled leaves. In youth, some plants have leaves with light white flecking. As plants settle into the landscape the white variegation becomes increasingly prominent. Choice, rare and a must for any variegated plant connoisseur! - #2 \$49.99; #3 \$79.99; #5 \$109.99 (July)

'Mercedes' - The slowest growing of the beeches we currently offer showcasing incised, fine-textured, rich green leaves that bare a remarkable resemblance to those of *F. sylvatica* 'Asplenifolia'. Like many members of the genus the foliage takes on rich rusty-bronze tones in autumn and persists through much of winter. Plants average around 4" of growth annually developing into 4' densely branched shrubs in many years. - #2 \$49.99; #3 \$79.99 (July); Assorted Specimens Individually Priced

'Purple Fountain' - A supreme specimen tree with elegant arching and cascading branches cloaked with dark purple-bronze foliage. Similar to other purple weeping forms but tends to maintain a narrower canopy and overall shape. - #3 \$69.99; #5 \$99.99 (July); #7 \$149.99; Assorted Specimens Individually Priced

'Roseomarginata' - A classic form with purple leaves that are edged with an irregular pale pink margin. One of the best variegated plants available and on the short list of variegated, purple foliage plants. 40' - #2 \$39.99 (July); #3 \$59.99 (July); Assorted Specimens Individually Priced

'Tortuosa' - Yet another remarkable European beech that we wouldn't garden without. 'Tortuosa' develops into an enchanting specimen, complete with twisted and gnarled stems that bear a strong resemblance to those of a weeping Japanese maple. Plants are modest growers developing a framework that is broader than high. Those who see the century old specimens at the Arnold Arboretum in Boston will most certainly find the beauty in this fine plant! 15 x 20' - #2 \$39.99; #3 \$59.99 (July); Assorted Specimens Individually Priced

'Tortuosa Purpurea' - A very cool contorted form of European beech developing a free-flowing, sculpted form in time. The irregular branched specimens are cloaked with attention grabbing deep purple foliage throughout the growing season and offer an equally impressive silhouette in the dormant garden. #7 \$149.99; Assorted Specimens Individually Priced

Ficus carica - Common Fig - Z6b

A long cultivated and valuable commercial fruit species native to the Middle East and Asia. The fruiting qualities of the large shrubs or small trees have long been recognized in the region with many taking on the arduous task of hefting large containerized specimens in and out of the garage with the progression of the

seasons. Fortunately, the development of several cold hardy selections has begun to show promise and gardeners have begun to find success cultivating plants in the ground in the exposure of zone 6 conditions. With this has come a resurgence of interest in cultivating this ancient plant for fruit as well as a revitalization in the appreciation of its ornamental virtues.

'Chicago Hardy' - An excellent brown fig grown for its large crops of rich, sweet fruit and excellent cold hardiness. This combined with its lush, texturally pleasing, heavily lobed leaves makes for a wonderful container subject or dependable garden specimen in our region. Fruit develop in abundance and begin to mature in early August and will continue consistently until frost. Siting in rich, evenly moist soils in a sun-drenched, protected location is advisable for best performance. Some winter protection is good insurance to limit tip dieback and promote earlier fruit development. 6-8' - #2 \$34.99; #3 \$49.99 (July); #5 \$69.99

'Olympian' - A cold hardy selection developed in Olympia WA. Plants yield a prolific early crop of figs giving gardeners in zone 6 an excellent opportunity to relish the fruiting qualities of these fun plants. The purple fruit are reported to be as large as tangerines with sweet, flavorful flesh. Ornamentally, the bold heavily-lobed leaves add tropical drama to the garden. Those living in colder climates might consider this selection for container culture. - #2 \$34.99; #3 \$49.99 (July); #5 \$69.99 (July)

Franklinia alatamaha - Franklin Tree - Z6

A storied small specimen tree or large shrub thought to be extinct in the wild. Originally, collected by John Bartram in the late 1700's along the banks of the Altamaha River in Georgia, the plant has not been seen in the wild since. Franklinias offer wonderful, 2-3", white, camellia-like flowers in late summer followed by brilliant, scarlet and orange fall color. Plants can be somewhat difficult to establish in the garden but are well worth the effort, besides they make great conversation pieces! 10-20' - #2 \$39.99 (July)

'Wintonbury' - A selection made by Mark Sutcliffe from one of the largest plants growing in CT. Plants exhibit typical franklinia characteristics but also offer improved cold hardiness and disease resistance. - #2 \$39.99; #5 \$89.99 (July)

Gleditsia triacanthos f. inermis - Thornless Honeylocust - Z4

A common shade tree that has been long valued for the dappled shade provided by the airy framework of the small specimens. The vigorous plants showcase fine-textured compound leaves that are typically bright green in color through the growing season and yellow cast in fall. Though variable in size, most standard forms top out in the 30-50' range at maturity. The straight species, *Gleditsia triacanthos* sports sadistic 3" thorns capable of sending those with faint hearts running. Fortunately, the form *inermis* is thornless and much more amenable to average garden settings. Plants are native on the fringes of New England ranging from Pennsylvania to Nebraska and south to Texas.

'Emerald Cascade' - An uncommon weeping form that fits the Broken Arrow product mix perfectly. Leaves are deeper green than the species and plants boast an elegant, graceful framework. Requires a bit of staking to gain altitude or can become an unusual trailing accent if left to its own efforts. - #7 \$99.99; Assorted Specimens Individually Priced

'Pin Cushion' - We're pushovers for the cheap thrills that the eccentric side of the plant kingdom can bring. To this end we were drawn to 'Pin Cushion' for its curious tufted greenery that is clustered and punctuated against olive colored stems. Lacking thorns this pin cushion is soft textured yet takes on an irregularly fashioned framework of open, airy stems. Yes it's a wacky plant and one that our madcap customers are sure to adore. - #5 \$79.99; #7 \$99.99; Assorted Specimens Individually Priced

NEW *Gymnocladus dioica*

Kentucky Coffeetree - Z3 - **Native**

A very fun North American bean family member that is unjustly rare in northeastern US gardens. The sizeable ovate crowned plants offer irregular, almost spooky structure in youth, becoming more refined with age. Stout twigs are adorned with massive bipinnately compound leaves that can reach as much as 3' in length. Leaves are deep green through the season adding a comforting backdrop to spring's pyramidal flower panicles comprised of heavily perfumed white blossoms. 7" heavy textured pods, produced in autumn, house large seeds that were used by early settlers as a coffee substitute. Plants are well suited for large properties in rich, evenly moist scenarios. 50'
Assorted Specimens Individually Priced

Halesia tetraptera - Carolina Silverbell - Z4

A fast growing specimen tree native to the southeastern United States where it grows as a small to medium-sized tree in understory settings. In the wild, plants are capable of reaching heights of 40-60' however 20-30' is more common under cultivation. Clusters of delicate, white, bell-shaped flowers dangle from the branches in spring creating a charming display, especially when viewed from beneath. Unusual, four-winged fruit develop in autumn and persist into cooler weather providing additional interest. Plants perform best in full sun or high canopy shade in moist, well-drained acidic soil.

'Silver Splash' - A rarely encountered variegated form of Carolina silverbell featuring an irregular, creamy-white variegation pattern that brightens each leaf. Originated as a chance branch sport at the Tyler Arboretum, Media, PA. - **Assorted Specimens Individually Priced**

'UConn Wedding Bells' - A multi-stemmed selection of Carolina silverbell made by UConn's Dr. Mark Brand for its prolific and consistent floral display. Makes an excellent specimen plant and is a fine representative of this wonderful species! 20-30' - #2 \$39.99 (July); #7 \$129.99; **Assorted Specimens Individually Priced**

Halesia tetraptera var. monticola

Mountain Silverbell - Z5

A moderate-sized upright-spreading tree capable of reaching 40' or more in height in the wild but is more commonly found in the 20-30' range under cultivation. Plants display bountiful clusters of white, bell-shaped flowers in mid-spring. Plants are adaptable to varied conditions but perform best in a rich, well-drained location in part shade.

'Arnold Pink' - A tree-like form with unique, pale pink flowers. Introduced by the Arnold Arboretum. - **Assorted Specimens Individually Priced**

NEW **'Rosy Ridge'** - A choice mountain silverbell that was selected and introduced by our friends at Hawksridge Farms in North Carolina. The primary excitement relates to the clear-pink, bell-shaped blossoms that provide much visual impact in spring. Flowers are a few shades deeper than the long cultivated 'Arnold Pink' adding a bit more illumination to the garden. As with the straight species, plants will perform in both sun and bright shade. 20-30' - **Assorted Specimens Individually Priced**

'Variegata' - A rare mountain silverbell offering foliage edged with a unique creamy-yellow pattern. A totally wild leaf coloration, unlike any other variegated plant we've seen.
Assorted Specimens Individually Priced

Heptacodium miconioides - Seven Sons Flower - Z4

An underutilized deciduous shrub or small tree. Develops sweetly fragrant, white flowers in August and September followed by brilliant red calyxes in October. The overall effect is breathtaking and is much like having two completely different bloom periods. In winter, the tan-brown bark exfoliates in thin strips and plates

to reveal startling whitish inner bark. A great specimen plant or addition to the shrub border. 15-20' - #3 \$59.99; #5 \$89.99; #7 \$109.99; **Assorted Specimens Individually Priced**

Idesia polycarpa - Igiri Tree - Z6

A seldom encountered dioecious tree native to southern Japan and central China. Plants are vigorous and display large dark green, unblemished, catalpa-like foliage. In fall, female plants showcase a striking crop of cranberry-sized, bright red fruit born in 4-8" drooping chains. Overall, a curious plant sure to stump most any plant geek! If you're not convinced, take a trip to New York's Wave Hill Public Garden this fall and witness their mature grove of igiri trees in all its glory. 35-40' - #7 \$109.99; **Assorted Specimens Individually Priced**

Koelreuteria paniculata - Golden Rain Tree - Z5

A moderate-sized specimen tree boasting deep-green, pinnately compound leaves along coarse textured branching. Abundant bright yellow flowers held in sizeable open clusters appear in July. Unique greenish-yellow, papery capsules develop in autumn extending the season of interest. The capsules often dry on the trees and persist deep into the winter months. Plants perform best in sunny locations in any reasonably well-drained soil. They are pH adaptable and tolerant of pollution and urban environments. 30'

'Coral Sun' PP 17409 - A breakthrough selection that has finally arrived on US soil after countless years of effort. Plants burst forth in spring with show-stopping hot orange-pink new growth sure to elicit admiration. The color is unique in the world of plants and sure to add much interest in the spring garden. After several weeks of display the foliage returns to the medium green associated with the species. Plants are slower growing than the species developing into large shrubby specimens. #3 \$59.99; #5 \$89.99 (July); #7 \$109.99; **Assorted Specimens Individually Priced**

Liquidambar styraciflua - Sweetgum - Z5 - **Native**

A large, deciduous tree valued for both its timber and ornamental qualities. In the landscape, plants develop into stately specimen trees when given enough room. Their unique, star-like leaves, which turn dramatic shades of crimson, yellow and purple in fall, have few rivals. Overall, a wonderful, easy going tree at home in all soil conditions. 75'

'Slender Silhouette' - The exclamation point of the sweetgums forming an absolute pillar of foliage some 60' tall and only 6' wide at maturity. Makes a perfect, fast growing subject for narrow situations where vertical accent is required. Discovered by renowned plantsman and all around plant fanatic Don Shadow. #3 \$59.99; #5 \$79.99; #7 \$99.99 (July); **Assorted Specimens Individually Priced**

'Variegata' - An eye-catching sweetgum cultivar with unique, yellow-streaked and spotted foliage. Show stopping pink and scarlet, two-toned fall color completes the package. #2 \$39.99; #5 \$79.99; #7 \$99.99; **Assorted Specimens Individually Priced**

'Variegated Worplesdon' - A slow growing, semi-dwarf cultivar of sweetgum that develops into a pyramidal, large shrub or small tree with time. The star shaped leaves have a unique toothed margin that is distinct among sweetgums. Each leaf is also attractively variegated with an intriguing mosaic of cream and green tones that develop a showy blend of orange and scarlet in autumn. Excellent for smaller properties and most certainly worthy of wider landscape use. - #5 \$79.99; #7 \$99.99 (July); **Assorted Specimens Individually Priced**

Liriodendron tulipifera - Tulip Tree - Z5 - **Native**

A classic, large deciduous tree native to the forests of the eastern United States. The uniquely shaped leaves provide interest throughout the growing season and often turn rich, butter-yellow

in autumn. Yellow-green flowers, brushed with orange closely resemble tulips and are present in May and June. Unfortunately, the flower display is often masked by the foliage and not produced close to the ground.

NEW 'Fastigiatum' - An architectural selection valued for its strongly vertical framework. The distinctive plants are well suited for many applications and are much less cumbersome than the straight species. Plants can be expected to reach 35-40' in height and 10-15' wide over 20 years. - #7 \$99.99; Assorted Specimens Individually Priced

Maackia amurensis - Amur Maackia - Z4

A rare, moderate-sized deciduous tree found growing wild in Manchuria. The large compound leaves emerge slate-blue in spring and age to dark green. In mid-summer an abundance of 4-6" white flower spikes are produced throughout the canopy. Winter interest is provided by the respectable amber-bronze bark. 35-40' Assorted Specimens Individually Priced

Magnolia ashei - Ashe Magnolia - Z6

Ashe magnolia is a fascinating small tree or large multi-stemmed shrub that is sure to impress all visitors to the garden. It is closely allied to the big leaf magnolia (*Magnolia macrophylla*) but tends to bloom at a dramatically younger age. In spring, the tropical looking 15-20" leaves provide a perfect backdrop for the massive 12-15" sweetly fragrant, creamy-white flowers. The overall effect is truly striking and looks like something straight out of Jurassic Park! Fist-sized, rose-pink fruit appear in fall providing additional ornamental appeal. Plants grow best in rich, well-drained soils in full sun or partial shade. Additionally, they benefit from some frost protection early in life. 30'. - #2 \$39.99; #3 \$59.99 (July); #5 \$79.99 (July); #7 \$99.99; Assorted Specimens Individually Priced

Magnolia grandiflora - Southern Magnolia - Z6

If you're from the south this is the plant that comes to mind when someone says the word magnolia. The large evergreen specimens develop a handsome oval framework of impeccable, unblemished 5-10" lustrous, deep green leaves backed with brown pubescence. Massive, fragrant, pure white flowers create a grand spectacle in spring and sporadically throughout the remainder of the growing season. In our region plants perform best in rich, well-drained soil and benefit from protection from exposure and winter winds. 60'

'Bracken's Brown Beauty' - A well known hardy form of southern magnolia showcasing deep green, wavy leaves backed with an abundance of fuzzy-wuzzy pubescence. Plants appear to be easier to grow than some other selections and are among the best forms for cultivation in our area. - #3 \$59.99; #5 \$79.99; #7 \$99.99; Assorted Specimens Individually Priced

'Kay Parris' - A fine southern magnolia selection displaying a compact habit and upright form. The rich green leaves are backed with orange-brown fuzz and are smaller than many other selections. Prolific, sweetly scented, creamy white flowers adorn plants throughout summer. 20' tall x 10' wide. - #3 \$59.99; #7 \$99.99 (July); Assorted Specimens Individually Priced

Magnolia stellata - Star Magnolia - Z4

A common magnolia developing into a large, rounded, shrub-like specimen in time. In April, the bare, gray branches are cloaked with masses of 3-4" white flowers with numerous tepals. Plants are among the hardiest of magnolias and are adaptable to a range of growing conditions.

'Centennial' - An excellent selection introduced by the Arnold Arboretum to commemorate their 100th anniversary. Plants are vigorous growers with large, 5-6", fragrant flowers composed of 28-32 individual tepals. Our 25' specimen always draws attention in spring. - #2 \$39.99; #5 \$79.99 (July)

Magnolia virginiana - Sweetbay Magnolia - Z5 - **Native**
A small, graceful, multi-stemmed shrub or small tree native to the

eastern United States. Displays beautiful, white, lemon-scented flowers in June and sporadically throughout the summer. Flowers are set off by 6", glossy, dark green, silver-backed leaves. Develops into a worthy specimen plant. 25-30'

var. australis 'Perry Paige' Sweet Thing™
PP 17814 - A cute new dwarf sweetbay magnolia forming a shapely mound of lush, semi-evergreen foliage. After 14 years the original plant attained a bushy, rounded stature of only 8' tall x 6' wide. Early reports indicate superior evergreen tendencies with no foliar damage and good leaf retention when temperatures dipped below 0 F. An excellent variant of this wonderful native and well suited for use in the border or for screening and hedging. - #3 \$69.99; #5 \$99.99 (July); Assorted Specimens Individually Priced
'Wilson' Moonglow® - An upright cultivar with exceptional cold hardiness and superior vigor. Plants will mature up to 35' in height and remain semi-evergreen in sheltered locations. Selected by Earl Cully. - #2 \$39.99; #3 \$59.99; #7 \$129.99 (July); Assorted Specimens Individually Priced

Magnolia x 'Anticipation' - Anticipation Magnolia - Z5
A *Magnolia cylindrica* hybrid that blossoms early in the season for us with masses of large, ivory-white flowers that appear almost luminous if the sunlight hits them just so. The flowers are held upright on the sturdy branches and have good form, refusing to flop as they age. Always a reliable performer and a fine plant to welcome spring. - #3 \$59.99; #7 \$129.99 (July)

Magnolia x 'Blushing Belle' - Blushing Hybrid Magnolia - Z5
A splendid Dennis Ledvina hybrid that resulted from a cross between *Magnolia* 'Yellow Bird' and *M. 'Caerhays Belle'*. Plants are eye-catching treasures when in full bloom, sending forth masses of luxuriant 6" deep pink blossoms that awaken and enliven the spring garden. Overall, flowers are similar to the parent 'Caerhays Belle' yet more cold tolerant. - #2 \$39.99; #3 \$59.99; #7 \$129.99 (July)

Magnolia x 'Daybreak' - Daybreak Hybrid Magnolia - Z5
Augie Kehr rated this hybrid the best of his many choice introductions. Displays a brilliant show of 8", fragrant, glowing, rose-pink flowers in early May after the threat of late season frost has passed. Plants are exceptionally vigorous and develop a distinct upright growth habit. 30' - #2 \$39.99; #3 \$59.99; #7 \$129.99

Magnolia x 'Elizabeth' - Elizabeth Magnolia - Z4
A popular and outstanding selection introduced by the Brooklyn Botanic Garden. A profusion of clear, creamy-yellow flowers open in spring prior to leaf emergence. Customers literally stop in their tracks when our 35' specimen is in bloom. One of the best and worth a place in any garden! - #3 \$59.99; #5 \$89.99; #7 \$129.99 (July); Assorted Specimens Individually Priced

Magnolia x 'Exotic Star' - Exotic Star Magnolia - Z6
A desirable hybrid from famed magnolia breeder Dennis Ledvina. This exciting selection combines the unlikely parentage of *Magnolia sieboldii* and *Magnolia grandiflora*. The result is a summer blooming evergreen tree with abundant, large white blooms embossed with orange-red stamens. 'Exotic Star' can be expected to bloom from a young age and displays flowers against a backdrop of glossy, deep-green foliage backed with a dose of fuzzy-brown indumentum. - #5 \$89.99; #7 \$129.99 (July); Assorted Specimens Individually Priced

Magnolia x 'Galaxy' - Galaxy Hybrid Magnolia - Z5
An extraordinary, upright-pyramidal selection from the U.S. National Arboretum. Striking, 6-10", beet-red flower buds open reddish-purple in late spring after danger of frost. Displays excellent vigor and will mature 20-30' tall. Consistently a

customer favorite! - #2 \$39.99 #5 \$89.99; Assorted Specimens Individually Priced

Magnolia x 'Genie' PP 20748 - Genie Magnolia - Z6
A breathtaking, highly sought after magnolia that has grabbed our attention and won't let go. The shapely, cup like blossoms are saturated purple in color and emerge in the greatest abundance in early May from sexy burgundy-black buds. As an added bonus a secondary flush of blossoms occurs sporadically into August adding valuable summer interest. Flowers emit a gentle fragrance and are colored on both the interior and exterior surfaces. Plants develop a compact well branched form reaching 15' in height. #3 \$59.99 (July); #7 \$129.99; Assorted Specimens Individually Priced

Magnolia x 'Golden Rain' - Golden Rain Magnolia - Z4
A distinctive strong growing magnolia developed by talented magnolia breeder Dennis Ledvina. Plants display unique, pendulous yellow blossoms that dance at the tips of the branches in spring. Each is comprised of six broad tepals held in a well-formed inverted cup shape along the distinctly upright branches. Still quite new to the market yet certainly worth trying for its fresh take on this classic group of plants. - #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

Magnolia x 'Judy Zuk' - Judy Zuk Hybrid Magnolia - Z5
A fine magnolia named in memory of an extraordinary horticulture leader and former president of the Brooklyn Botanical Garden. Plants provide a stellar tribute of well formed sweetly fragrant flowers that combine rich yellow petals with distinctive orange, apricot and pink highlights. The plants are well branched developing a vigorous upright form in youth, becoming oval with age. - #7 \$129.99; Assorted Specimens Individually Priced

Magnolia x 'Jurmagi' Black Tulip™
Black Tulip™ Magnolia - Z5
An astonishing selection showcasing 6", burgundy-black blossoms that are among the darkest of any magnolia to date. The robust flowers are well formed developing a resemblance to a tulip as they unfurl prior to leaf emergence. Plants make choice small specimens reaching 25' when mature. - #3 \$59.99 (July)

Magnolia x 'Lois' - Lois Hybrid Magnolia - Z4
Another fine magnolia bred at the Brooklyn Botanical Garden by Dr. Lola Koerting and named in honor of Lois Carswell. 'Lois' is somewhat similar to its well known parent 'Elizabeth' but blooms a little bit later in the season with well formed 3-5" flowers that are a few shades closer to true yellow. Flowers still open prior to leaf anthesis yet after mother nature expends spring's final frost. #7 \$129.99; Assorted Specimens Individually Priced

Magnolia x soulangiana - Saucer Magnolia - Z5
An upright, rounded deciduous magnolia with large white to pink to purple flowers in early spring before leaf emergence. Handsome, smooth gray bark provides added interest. 15-20'
'Kiki's Broom' - A new form that piqued our curiosity when we saw it listed by one of our suppliers. They indicated that 'Kiki's Broom' is a dwarf, broad spreading magnolia that was discovered as a witches' broom. Plants have small leaves and shorter internodes than are typical for most magnolias. An abundance of creamy-white and pink flowers are produced each spring. Plants perform best in full sun exposures in any rich, well-drained soil and will reach 2' tall x 5' wide in 10 years. An interesting option for those looking for a magnolia but lack the space required for larger forms. - #3 \$59.99; #5 \$89.99 (July); Assorted Specimens Individually Priced

'Milliken' - A unique, compact selection found as a witches' broom by Greg Williams and Sue Milliken near Rhinebeck, NY. Plants are compact and dense with short internodes and a

rounded outline. In spring they flower profusely with standard sized, whitish-pink flowers. A real gem likely found nowhere else!
Assorted Specimens Individually Priced

Magnolia x 'Sunsation' - Sunsation Magnolia - Z5
Another excellent late bloomer with deep golden-yellow petals, each brushed with a purple splash at the base. The sizeable, 7-8" flowers are held upright on the branches and provide a continual display for several weeks in May. Plants are moderate growers developing a formal, cone-shaped habit at maturity. 20-25' #3 \$59.99; #7 \$129.99

Magnolia x 'Sunspire' - Sunspire Hybrid Magnolia - Z5
A recent introduction just starting to become better known. Displays rich yellow flowers late in the season on a distinctly fastigate plant. An excellent choice for tight spots or side yards. Plants mature 25' tall and only 6' wide. - #3 \$59.99; #7 \$129.99

Magnolia x wieseneri 'Aashild Kalleberg'
Aashild Kalleberg Magnolia - Z5
A vigorous grower that is presumed to be a hybrid between M. hypoleuca and M. sieboldii. Plants offer bold, tropical foliage and numerous, upright facing, 6-8", pure white, fragrant flowers with deep red stamens. - #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced

Magnolia x 'Yellowbird' - Yellowbird Magnolia - Z4
A popular upright selection with deep, canary-yellow flowers that are seldom damaged by spring frost. Flowers emerge just as the foliage is expanding. Shows excellent cold hardiness. 30' #3 \$59.99; #7 \$129.99; Assorted Specimens Individually Priced

Malus - Apple - Z4
A large group of popular flowering trees that have been long cultivated for fruit production and impressive floral qualities. The small trees generally develop a rounded framework of irregular branching. In spring, a wealth of blossoms cloak the stems prior to leaf emergence. Flowers run the range of colors from pure white through shades of pink and red. When properly pollinated the flowers develop into apples by fall. Though all are edible they are tremendously variable spanning a range of sizes from diminutive pea-sized "crabapples" to those that approach the proportions of a grapefruit. The fruit is attractive and adds much seasonal value to the ornamental garden. Plants are generally easily cultivated showing best performance in full sun locations with evenly moist, organic rich soils. Care should be taken to avoid planting specimens in close proximity to junipers as they become predisposed to the harmful disease cedar apple rust.

NEW sp. (Yinger Variegated) - Another very rare plant in our quiver of uniqueness! This, a variegated clone of crabapple of unknown Japanese origin. Plants are quite strong growing showing irregular yet stable coloration on each leaf. The overall pattern presents a green backdrop with streaks, speckles and splashes of white. Our young plants have yet to bloom though we have high hopes for a strong floral display and impressive fruit set to complement the unique foliar impact. Who would have thought of growing an apple for colored foliage? Why not?! Expect plants to add a foot or more of annual growth and mature in the 20' range. #7 \$109.99; Assorted Specimens Individually Priced

x 'Scarlet Sentinel' - Another columnar apple selection offering all the valuable attributes of 'Golden Sentinel' except for the fruit. 'Scarlet Sentinel' showcases large apples that more closely resemble a classic red delicious. - #7 \$99.99; Assorted Specimens Individually Priced

Morus alba - White Mulberry - Z4
An irregular branched, rounded tree with a twiggy structure. The durable plants are transplanted readily, showing strong tolerance to diverse soils and light levels. Certainly amongst the more rugged

plants available. The variable leaves range in color from pale green to high gloss, deep green tones and range in shape from a simple heart-shaped structure to prominently lobed. Often plants showcase multiple leaf shapes on the same branch. Female plants produce bumper crops of blackberry-like fruits that entice many bird species. In landscape situations the straight species is rarely cultivated. Plants demonstrate weedy qualities and sadly the fruit stains deeply, leaving marks on pavement, sidewalks, cars and fingers. Fortunately, a few cultivars are available that offer much greater ornamental value.

'Ho-o' - Very cool, crinkled and crumpled foliage that bears very little resemblance to the species. Visitors to the garden can't help but ask the "what's that" question. Excellent as a cutback shrub, plants show wonderful textural qualities in mixed plantings. Should also be a fun addition to the vase as a cut stem. Can reach 30' if allowed to develop though we find it best to give plants an annual haircut which allows them to top out at 5-8' by season's end. **#3 \$59.99; #7 \$129.99; Assorted Specimens Individually Priced**

'Paper Dolls' - An intriguing selection of white mulberry boasting glove-shaped leaves that are heavily mottled and splashed with creamy-white. Plants are vigorous growers forming irregular 15' shrubby trees in time. Great for both color and alluring foliage texture! Photos often look incredible though we warn that plants show a tendency to revert back to green. We love it when at its best and as a result are willing to put in 10 minutes each year to remove any green shoots from our specimen. **#2 \$39.99; #3 \$59.99; #7 \$129.99**

(Silver Center) - A very rare variegated clone of white mulberry that hails from Japan. Plants sport deep green, slightly glossed leaves prominently highlighted with a silver-white patch of variegation along the central portion of each uniquely lobed leaf. Plants are strong growing and sun tolerant showing good performance in bright, sunny exposure. Though plants show capacity to reach the full proportion of the straight species we recommend using this as a cutback shrub as a well coppiced specimen will certainly add textural flair and foliage color to a well designed mixed border. - **#2 \$39.99; #3 \$59.99**

Nyssa sylvatica - Black Tupelo, Black Gum - Z4 - **Native**
A magnificent, slow growing, medium-sized, deciduous native tree. The oval foliage is lustrous dark green in summer and transforms to vivid shades of orange, scarlet and yellow in autumn. Female plants frequently produce copious crops of blue fruit that are cherished by birds and other wildlife. In winter, the dark, blocky bark and unique branching pattern provide added interest. 30-50'

'Autumn Cascade' - An elegant, weeping selection that we introduced from Australia a few years back. Plants develop excellent red, orange and yellow fall color. If a tree form is preferred, some staking is required to develop and maintain a central leader. - **#3 \$59.99 ; #7 \$129.99; Assorted Specimens Individually Priced**

'Big Momma' - A unique cultivar offering huge waxy-green leaves and larger fruit. Both the foliage and fruit are nearly twice the size of typical seedlings. Plants develop brilliant scarlet fall color. - **#2 \$39.99; #5 \$89.99 (July)**

'Sheri's Cloud' - Can you say amazing? That's what we said when we first saw this spectacular clone of black tupelo! Imagine, if you will, light green leaves edged with a bold, creamy-white margin! Add to that dazzling scarlet and hot pink, bi-colored fall color and you've successfully envisioned 'Sheri's Cloud'. A brilliant find from the wilds of Arkansas and a welcome addition to the growing selection of cultivars. - **#5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced**

'Wildfire' - A dazzling selection offering startling burgundy-red new growth that is present as long as new growth is being produced. Plants exhibit exceptional vigor and bright scarlet-red fall color. - **#7 \$129.99; Assorted Specimens Individually Priced**

'Zydeco Twist' - A distinct and downright cool black gum showcasing stems that twist and spin in all directions. They're quite akin to Harry Lauder's walking stick and are certainly not what most have come to expect from this fantastic species! Regardless, this is a striking plant for those looking for a fun addition to their gardens. - **#3 \$59.99; #7 \$129.99; Assorted Specimens Individually Priced**

Oxydendrum arboreum - Sourwood - Z5
An eye-catching small flowering tree, native to the southeastern United States. In mid-summer plants develop elegant, drooping racemes of white, urn-shaped flowers. The overall display can be breathtaking and often remains effective for several weeks. In fall, the glossy, dark green foliage transforms to fiery shades of crimson and scarlet. Plants thrive under conditions suitable for other ericaceous plants. - **#2 \$39.99 (July); #3 \$59.99 (July); Assorted Specimens Individually Priced**

Parrotia persica - Persian Parrotia - Z5
Persian parrotia is a remarkable, underutilized member of the witch hazel family native to regions of northern Iran. Plants develop into low-branched, moderate-sized specimens with a patchwork of exfoliating gray, green and white bark at maturity. In late winter, flowers composed of rich, crimson-red stamens and maroon bracts create a curious effect along the barren stems. Foliage unfolds blushed with red-purple and changes to unblemished, dark green with age. Shimmering yellow, orange and crimson fall color prevails on the finest specimens. 20-40' **Assorted Specimens Individually Priced**

'JLColumnar' Persian Spire™ PP 24951

A tremendous selection of Persian parrotia that combines a spire-like framework with impeccable foliage. The strong growing plants welcome spring with a heavy dose of burgundy flushed and edged leaves. As the season progresses the color settles on rich deep green before autumn's cold air forces a transition to a riot of orange and scarlet-red. The versatile plants are strong growing with tight, ascending branches and can be expected to top out around 25' in height an 10' in width. Hedging and screening are obvious uses though use as a formal street specimen or vertical accent is also worth considering. - **#2 \$39.99; #3 \$59.99 (July); #5 \$89.99; #7 \$129.99; Assorted Specimens Individually Priced**

'Lamplighter' - An exciting wow plant with leaves that are boldly splashed and streaked with creamy-white variegation. Fall color finds the variegation pattern flushed with pink and purple. Certainly a tasty treat for the plant enthusiast. **#2 \$49.99 (July)**

'Pendula' (Kew Form) - A graceful weeping parrotia that develops into a great specimen plant in time with excellent, red-orange-purple fall color and handsome mottled bark. Our plants are descendants of the magnificent weeping specimen that resides at Kew Gardens in England. - **#2 \$39.99; #3 \$59.99 (July)**

'Persian Lace' - Another variegated form of parrotia offering curious leaves that are haphazardly highlighted with green, gray and white streaking. The variegation is not as pronounced as 'Lamplighter' however it is still quite attractive in its own right. Plants are still extremely rare and will undoubtedly be coveted by collectors and garden enthusiasts alike. **#7 \$129.99; Assorted Specimens Individually Priced**

Parrotia subaequalis - Chinese Parrotia - Z6
A large shrub or small tree native to China where it was only recently described and introduced to western horticulture. Plants produce narrower leaves than its more commonly cultivated sibling, the Persian ironwood (*Parrotia persica*) and turn consistent shades of burgundy-purple in autumn. The muscular wood develops a wonderful patchwork of grays, greens and creams with age. Like many members of the witch hazel family this species will show best growth in acidic soils with even moisture and protection

from hot afternoon sun. 30' - #2 \$44.99; #3 \$69.99 (July); #7 \$149.99; Assorted Specimens Individually Priced

Platanus x acerifolia - London Planetree - Z5

A group of plants resulting from a cross between *Platanus orientalis* and *P. occidentalis* that was initially discovered in London in the mid 1600's. All develop into sizeable specimens capable of reaching 70-100' in height over a lifetime. The alternate, maple-like leaves are typically deep green in color and stand in stark contrast to the impeccable cream, tan and olive patchwork-like bark. Plants are easy to cultivate preferring rich, deep, fertile soil but show strong adaptability to about any combination of conditions. At their best in large spaces where their true potential can be expressed. Alternately, we've utilized this plant wonderfully as a cutback specimen and find that it can add significant textural appeal to the back of the border when managed in this fashion.

'Suttneri' - An unjustly rare form of sycamore or planetree that caught our attention several years back while wandering the grounds of Boston's famed Arnold Arboretum. Much like the straight species 'Suttneri' forms a majestic specimen best known for its adaptability to tough soils and incredible alabaster exfoliating bark. As an added feature the maple-like leaves of this fine selection are heavily streaked and splashed with white variegation! We find it inspiring when plants are allowed to reach their mature dimensions but also think this cultivar makes a strong statement when grown as a pleached specimen in the back of the shrub border. - #2 \$39.99 (July); #3 \$59.99 (July); Assorted Specimens Individually Priced

Populus - Poplar - Z5

A group of approximately 25 deciduous trees allied to the willows. Plants are strong growing and prefer sunny exposure. The ornamental value and garden performance of this group is highly variable with both all-stars and minions in the mix. Ecologically speaking they are an intricate component to boreal forest ecosystems and an essential food for a diversity of butterfly species. We've explored the group with the garden in mind and have opted to offer a few choice selections for those intrigued.

'Purple Tower' - A promising selection from the UK offering up alluring wine red spring growth on a vertical oriented framework. Leaves are supported by rich purple-red stems. A strong growing plant well suited for columnar emphasis. Plants are at their best when cultivated in average garden soils in full sun. Under their own control, plants can extend to 40' in height with a 10' spread. For those willing, an annual haircut can be utilized to maintain a more shrub-like stature. - #2 \$39.99; #3 \$59.99 (July); #7 \$109.99; Assorted Specimens Individually Priced

***x candicans* 'Aurora'** - A long cultivated hybrid poplar with origins that trace back to the 1920's. The colorful plants are sure to provide ample aesthetic cheap thrills with attention grabbing leaves of pink, white and cream. The color is most pronounced early in the season on young, strong growing shoots and as a result we recommend pruning plants back hard each spring to promote the best colored growth. The quick growing plants prefer full sun conditions and will tolerate seasonally moist soils. - #3 \$59.99; #7 \$109.99 (July)

Quercus cerris - Turkey Oak - Z4

A large deciduous oak that populates the wilds of eastern Europe and adjacent Asia minor. The glossy leaves are heavily yet variably lobed with rounded sinuses. Distinctive acorns are supported with a cup ensconced with soft, prominent hairs. The sturdy trunks are ridged and furrowed revealing a cream-orange basal coloration amongst the gray exfoliations. 80-100'

'Aureomarmorata' - An arresting selection of turkey oak valued for its impressively colored leaves that combine a brave quantity of cream and white pigment to complement a green undertone. Given the reduced photosynthetic capacity, it's not a

surprise that the plants are quite a bit slower growing than the straight species. That said, to our excitement the foliage seems to be durable with a strong capacity to stand up to the rigors of full sun. At present the ultimate size is unclear though our plants put on roughly 6-8" of new growth last year. - #2 \$49.99; #5 \$99.99; #7 \$149.99 (July)

Quercus dentata - Japanese Emperor Oak - Z5

A large deciduous species reaching 75' in height in the wilds of Japan. Plants have open branching comprised of stout stems and trunks covered with thick ridged bark. The leaves are quite dramatic and among the largest of the genus. Each is up to a foot long with wavy margins and shallow lobes at the terminus. As a member of the white oak group the large acorns are non-bitter and valued by wildlife. Plants are difficult to find yet add a dignified and bold presence to the garden.

'Pinnatifida' - One of those must have plants that people drool over when they see it. Each bold, tropical looking leaf of this beauty is deeply dissected into unique, shapely lobes that add a soft yet outrageous texture. Hard to describe but we wouldn't garden without it and neither should you! - #2 \$49.99; #3 \$69.99 (July); #5 \$99.99; Assorted Specimens Individually Priced

Quercus robur - English Oak - Z5

A sizeable European oak maxing out at around 50' tall with a broad oval canopy. The irregular branches are cloaked with green, white oak-like leaves characterized by their rounded lobes and varying glaucousness. Acorns mature in autumn and are prized by wildlife for their non-bitter, tannin-free flavor. Plants are cultivated in full sun in moist, fertile soils. They are more adaptable to varied pH than many other oak species. The best landscape use is in open exposures with ample room where they are free to reach their full, noble potential.

'General Pulaski' - One of those outrageous plants that is so ugly and so distinct that you can't help but fall in love. We certainly did and are happy that we've finally built up enough stock to share the love with a few of you. Plants are very un-oak-like developing a narrow, columnar form of coarse branching. The small leaves are very dark green and bizarrely puckered and congested along the stems. As with most oaks, plants prefer full sun with well-drained acidic soils. Unquestionably this will not be everyone's cup of tea yet we're confident that 'General Pulaski' will captivate a few of you. 10' x 3' - #2 \$59.99; #3 \$89.99 (July); Assorted Specimens Individually Priced

Sassafras albidum - Sassafras - Z4 - **Native**

A fine, native deciduous tree growing 30-40' tall in the wild. The long lived plants have a sculpted, horizontal branching form and frequently develop into colonies as they spread freely by underground root suckers. Specimens are dressed up with remarkable foliage that is present in several distinct forms. Some leaves will be oval, others will have a single lobe that resembles a mitten and the rest will have three lobes. Regardless of the shape all have a fresh green color during the growing season and complement the green twigs and orange-brown bark. As cool weather sets in, plants create a grand spectacle as they transition to dazzling shades of yellow, orange and red. As an added bonus all portions of the plants are aromatic and were once used extensively as a fragrance in perfumes, soaps and for seasoning foods and candy. In 1960 the FDA found the extracts to be harmful if consumed and has since passed laws to prohibit the sale of sassafras oil and tea. - #2 \$39.99; #3 \$59.99 (July); Assorted Specimens Individually Priced

Stewartia pseudocamellia - Japanese Stewartia - Z5

One of the finest and most desirable small specimen trees available. Offers numerous, white, camellia-like blossoms backed

by lustrous dark green foliage in summer. Fall brings on a startling display of fiery orange to reddish-purple leaf coloration. In winter, the plant stands alone with its remarkable smooth exfoliating bark that forms an elegant patchwork of gray, orange and brown against the winter landscape. A well-grown Japanese Stewartia truly has few rivals and should find a home in every garden. Upright growth habit. 20-30' - #3 \$59.99; #5 \$89.99 (July); Assorted Specimens Individually Priced

'Milk and Honey' - 'Milk and Honey' was selected by Polly Hill from a group of plants grown from seed collected at the Arnold Arboretum. In July plants develop an abundance of oversized, milky-white flowers that open flat to display their slightly ruffled petals and honey-gold stamens. Choice and very difficult to propagate so plants are rarely available! - **Assorted Specimens Individually Priced**

NEW 'Silver Seedling' - An exciting fresh take on a species that is hard to improve upon. 'Silver Seedling' unlocks a new dimension with pewter-gray foliage throughout spring and summer. The familiar camellia-like blossoms and prized exfoliating bark of the straight species complete the package. Our plants are still quite young so ultimate size is somewhat unclear. That said, annual growth seems akin to the standard species so we're expecting these to get sizeable in time. - #2 \$49.99; #3 \$69.99 (July)

var. koreana 'Korean Splendor' - A vigorous selection of *S. pseudocamellia* var. *koreana* with delightful, oversized saucer-shaped flowers that stay on the branches somewhat longer than typical seedlings. In autumn, plants offer reliable bright yellow to reddish-orange fall color. Has been a top performer in our garden offering the best features of this fine species. - #2 \$49.99; #3 \$69.99 (July)

NEW var. koreana 'Lindstrom's Weeping' - We love Stewartia and continue to acquire new selections of these fine plants as they appear. 'Lindstrom's Weeping' is an irregular, spreading selection of the Korean variant of this highly regarded specimen tree. The arching branch tips add a weeping feel to a framework that is otherwise gracefully haphazard, especially when set off by the flaky camouflaged bark of orange-browns and gray. Those longing for a strongly pendulous selection of this species will not find it here yet perhaps this is a step in the right direction! #2 \$49.99; #3 \$69.99 (July)

Stewartia rostrata - Beaked Stewartia - Z6
Beaked Stewartia is a little known, Chinese species that frequently develops into a large stature, upright shrub or small tree. In spring, the emerging flower buds are surrounded by showy, reddish-maroon floral bracts. The handsome flowers appear slightly earlier than other species of Stewartia and often measure up to 2.5" in diameter. In our climate, plants perform best in a protected location in partial shade.

'Pink Satin' - An exciting offering from Broken Arrow Nursery showcasing pale, shell pink flowers backed by a ring of burgundy-purple bracts. Flowering commences in mid May continuing for a 2-3 week period. Each blossom is approximately 1.5" in diameter with pigment coloration that radiates throughout each petal. The large, immature fruits add ornamental appeal with a rich, pinkish-red blush that stands apart from the glossy green foliage. New growth emerges in spring with a burgundy overtone and develops attractive scarlet tones in autumn. Plants are well formed developing a distinctive pyramidal canopy when young and averaging 6-12" of growth annually. Our original specimen measures 13' tall x 6' wide at 13 years of age. - #5 \$99.99; #7 \$149.99; Assorted Specimens Individually Priced

Stewartia x henryae - Hybrid Stewartia - Z5
A group of hybrid plants resulting from open pollinated crosses between *Stewartia pseudocamellia* and *S. monadelphica*. Each plant is unique, however, all offer traits that are intermediate between the two parents. As a general rule, most will display flowers that

more closely resemble *S. monadelphica* and bark that resembles *S. pseudocamellia*. All are spectacular and garden worthy!

'Skyrocket' - A fine hybrid from the Polly Hill Arboretum where the original selection still resides. Plants showcase strong vigor and a narrow growth form reaching 30-40' in height with a spread one third to half as wide. Flowers are produced abundantly from an early age with a size and structure similar to *Stewartia monadelphica*. - #3 \$69.99; #5 \$99.99; #7 \$149.99; Assorted Specimens Individually Priced

Stewartia x 'Scarlet Sentinel' - Scarlet Sentinel Stewartia - Z6
A recent selection introduced by Peter Del Tredici of the Arnold Arboretum. Reported to be a hybrid between *Stewartia pseudocamellia* and *S. ovata* var. *grandiflora*. The overall appearance is similar to typical *S. pseudocamellia*, however, the large white flowers are punctuated with striking rose-pink stamens rather than the more typical yellow stamens. Plants are very difficult to propagate yet are among the finest of the growing list of Stewartia cultivars! We are excited to be one of the only sources in the world for this choice selection. - **Assorted Specimens Individually Priced**

Styphnolobium japonica - Japanese Scholar Tree - Z5
A large, infrequently encountered shade tree developing into a massive specimen in time. Plants offer handsome, pinnately compound, blue-green foliage and masses of creamy-yellow, pea-like flowers in summer. Plants are adaptable, performing admirably in all but moisture laden soils.

'Gold Standard' - A new cultivar of scholar tree that appears to be extremely rare in cultivation. The little information we've been able to locate traces its origin to Japan. Plants boast unique golden yellow twigs that stand in stark contrast to the hunter green stems common of the straight species. Refined, pale green foliage emerges in spring with rich butter yellow tones and remains attractive throughout the growing season. Although we've yet to witness the flowers, we imagine that plants are capable of the dynamic floral display set forth by typical specimens. Ultimate size is still largely unknown yet we anticipate they certainly develop tree-like proportions. Wish we had more details but we're still learning with this one. - #2 \$39.99; #3 \$59.99 (July)

'Pendula' - A striking weeping form of Japanese scholar tree developing a fountain-like framework of twisted and arching stems. Plants are vigorous growers forming 15-20' picturesque forms in time. Specimens are rare in gardens but worthy of greater use. - #7 \$149.99

Styrax japonicus - Japanese Snowbell - Z5
The Japanese snowbell is likely the most frequently planted species of this remarkable genus. Plants form delightful, horizontally branched small trees. Slightly fragrant, 1" bell-shaped flowers dangle from the branches in late May and early June. The sight is one to be cherished and especially nice when viewed from beneath. Makes a great plant for use along patios or other places where the horizontal branch structure can be used to break up strong vertical lines. 20-30'

'Evening Light' PP 24168 - An exciting new selection of Japanese snowbell with luxuriant glossy purple cast leaves and abundant starry white, bell-shaped flowers. Though new to cultivation our initial impression suggests that plants will be good growers with an upright form. Additional trial and evaluation is required to better understand ultimate size and foliage quality. Why not give it a try with us? - #2 \$49.99; #3 \$69.99 (July); #7 \$149.99; Assorted Specimens Individually Priced

'Fragrant Fountain' PP 19664 - A new weeping form of *Styrax japonicus* that tends to develop an upright central leader with limited staking. All secondary branches weep strongly. Plants show excellent vigor and develop the same magical star-shaped, fragrant white flowers as the species. - **Assorted Specimens Individually Priced**

'Frosted Emerald' - An irresistible new styrax which promises to become one of the more coveted plants we grow! The slow growing plants showcase exquisite white-edged leaves that are so heavily variegated we question how they can muster the strength to survive. Certainly not a plant that's going to blend into the garden yet one that all collectors will lust after. - #7 **\$149.99**;
Assorted Specimens Individually Priced

'JL Weeping' Marley's Pink Parasol
PP 23755 - A choice styrax that recently arrived in the United States from Japan. Plants are admired for their elegant, weeping branch structure and loosely mounded form. In late spring, delicate, 1" pale-pink blossoms elicit much admiration. Plants form low spreading specimens if left to their own or can be trained to gain height. One of the best of all flowering trees. - #3 **\$69.99**;
#5 **\$99.99 (July)**; #7 **\$149.99**; **Assorted Specimens Individually Priced**

NEW 'Midnight Prince' - A 2018 Broken Arrow Nursery introduction! The original plant was selected from a group of open pollinated 'Pink Chimes' seedlings and has proven to be a standout after more than 12 years of trial and evaluation. Plants are strong growing, developing a straight central leader, adding 1-2' of annual growth with minimal pruning or training. In youth, plants assume an upright to pyramidal habit and become more spreading with age. Ultimate size is still unknown though a 10 year old plant reached approximately 13' tall and 10' wide in our trial gardens. Ornamentally plants offer a unique take when compared to the current cultivar diversity. Foliage emerges deep green in spring and accumulates some burgundy hues as the season develops. The color remains attractive through the growing season. In late May and early June plants are cloaked with an impressive display of 1" white blossoms each supported with a rich burgundy-purple calyx. The presence of the colored calyx impacts the display immensely, suggesting that the flowers are pink and the foliage is more deeply colored than reality. Those that have witnessed this selection in fully glory have been thoroughly impressed and we're delighted to make a select crop available for the first time this season!

#7 **\$149.99**; **Assorted Specimens Individually Priced**
'Pink Chimes' - A delightful, small-stature form offering unique, soft pink blossoms and dark glossy green foliage. A bit slower growing and more refined than the straight species and a bit less cold hardy than other selections.

#7 **\$129.99**; **Assorted Specimens Individually Priced**
var. fargesii - A vigorous, upright form that offers lustrous, dark green foliage and a prolific display of bell-shaped flowers. Easy to cultivate and harder than other selections.

#5 **\$89.99**; #7 **\$129.99 (July)**; **Assorted Specimens Individually Priced**

Syringa pinnatifolia - Pinnate Leaf Lilac - Z5
An ornamentally distinctive lilac that is both elusive in its native Chinese haunts and unjustly rare in cultivation. *S. pinnatifolia* boasts wonderfully textured fresh green compound leaves that more closely resemble a dwarf ash species than a lilac. Charming clear white flowers accent the greenery in May providing a picturesque scene when at peak display. Plants are upright growers showing considerable resistance to powdery mildew. Overall an excellent plant sure to provide interest throughout the seasons in a sun-drenched exposure. 8' x 4' - #7 **\$99.99**; **Assorted Specimens Individually Priced**

Syringa reticulata - Japanese Tree Lilac - Z3
An appealing small specimen tree suitable for use in a wide range of sites. Over time plants develop into versatile specimens some 15-20' in height. In May and June the oval-rounded canopy is covered with masses of frothy, creamy-yellow flower panicles. Attractive, cherry-like, brown bark provides added seasonal interest.

'Golden Eclipse' - A new Japanese tree lilac with showy, yellow-edged foliage throughout the growing season.

Makes an exciting combination with the large panicles of creamy-white flowers that appear in early summer. - #2 **\$39.99**;
#3 **\$59.99 (July)**

Tilia cordata - Littleleaf Linden - Z3
A deciduous medium-sized tree native to regions in Europe. Plants have long been in cultivation and are most valued for their formal pyramidal to conical habit and adaptability to difficult growing conditions. The heart-shaped leaves are deep green, free from disease and transition to shades of yellow and gold in autumn. Specimens are pollution tolerant, pH adaptable and easily cultivated in sunny locations in well-drained soils.

'Akira Gold' - A fantastic gold-leaf selection of littleleaf linden offering beautiful chartreuse foliage throughout the spring and summer months. Plants are good growers but require full sun to develop the best leaf coloration. Introduced by Akira Shibamachi, one of Japan's leading plantmen. - #2 **\$39.99**;
#3 **\$59.99 (July)**

Toona sinensis - Chinese Mahogany - Z5
A vigorous and curious deciduous tree hailing from Korea, China and Nepal as well as an assortment of other Asian countries. Plants have an upright oval framework with capacity to sucker from the roots. The smooth young bark matures with a shaggy quality, peeling into long strips. The dense, red-blushed inner wood is prized in fine furniture construction. Large clusters of white flowers are held among the glossy sumac-like leaves in early summer. The adaptable plants are tolerant of varied soils showing good performance in low fertility in both sun and part shade. Apparently in China the young leaves are used as a vegetable with an apparent onion-like flavor.

'Flamingo' - A highly desirable selection that welcomes spring like a bull in a china shop! Flamboyant flamingo-pink new growth abounds creating an eye-catching display. Sadly, the color subsides by July, though for us, this leads to added appreciation and a yearning for the future color blast of ensuing springs! - #7 **\$99.99**; **Assorted Specimens Individually Priced**

Ulmus parvifolia - Lacebark Elm - Z5
A durable species of elm used frequently in the landscape industry. The lustrous dark green leaves turn pleasant shades of yellow and reddish-purple in fall and provide an excellent complement to the gray, green, orange and brown mottled bark. Plants are vigorous, adaptable and easy to cultivate.

'Golden Rey' - An undemanding tree offering graceful, butter-yellow foliage that remains colorful and free from scorch deep into the growing season. Plants possess the typical grace, vigor and adaptability of the species. - #3 **\$59.99**;
#7 **\$109.99 (July)**

'Hokkaido' - A curious dwarf form with miniature toothed leaves and dense branching. Plants are ideal for rock gardens or a location where you won't step on them! 2' x 2' - #2 **\$49.99**; #3 **\$79.99 (July)**

'Lois Hole' - A compact, sculpted form of lacebark elm that develops an irregular, shrubby branching framework to 12-15' in height and breadth with age. Stems are graced with diminutive, deep-green leaves stenciled with a crisp white margin. Excellent in both full sun and part shade with tolerance to varied soil conditions. Would be an especially intriguing bonsai candidate. #5 **\$99.99**; #7 **\$129.99 (July)**

NEW (Yinger Variegated) - A fun variegated clone of lacebark elm that has garnered much attention through the years. Plants showcase diminutive leaves that emerge completely white in spring. At first emergence the leaves are less than 1/2" in length but seem to expand to 1" or more as spring turns to summer. As the season develops the leaves also begin to develop green zones, a valuable trait as this is likely the means by which the plants are able to harvest light energy and grow. Leaves remain colorful throughout

the year, always drawing attention with some quantity of white always present. In youth, plants offer a shrubby framework growing 4-6" annually under container culture. In the ground, with good fertility the growth can be more significant. Ultimate proportions are still unknown though we're thinking 12-15' is realistic over a 20 year time period. - #3 \$59.99; #5 \$99.99; #7 \$109.99 (July)

Ulmus x hollandica 'Wredei' - Wredei Columnar Elm - Z5
A unique, disease resistant elm that has sparked a lot of interest at the nursery. Plants showcase a wild display of golden-yellow, crinkled leaves held in crowded clusters along the branches. Over time plants develop into unique, upright specimens. A must see when you visit! 20-25' - #3 \$59.99 (July); #7 \$109.99; Assorted Specimens Individually Priced

X Gordlinia grandiflora - Gordlinia - Z6b
An unlikely hybrid of amazing beauty developed by leading plant breeder Dr. Tom Ranney that combines the parentage of Franklinia alatamaha and Gordonia lasianthos. The result is a vigorous shrubby-tree with traits that are intermediate between the parents. Foliage is glossy rich green during the growing season and transitions to plum and purple tones through much of the winter. Abundant, 3" white blossoms with prominent yellow stamens decorate the branches during late summer and into autumn. Best growth is likely to occur in a sheltered location with reasonably rich soil and free draining, evenly moist soils. Plants are truly beautiful and we are actively evaluating them for general garden performance in our region. That said, we feel that this is certainly a must for the avid gardener and serious horticultural collector and are pleased to have some available for you to try. - #3 \$69.99 (July); #5 \$99.99; #7 \$129.99 (July)

Zanthoxylem simulans - Chinese Prickly Ash - Z5
Chinese prickly ash is a deciduous shrub or small tree native to eastern China and Taiwan. Glossy, rich green compound leaves along spine covered twigs provide the perfect foil for summer's pale pink blossoms. Autumn's cool weather brings on a fine display of copious, reddish pea-sized fruit that split along a central suture to reveal a blackish seed. As plants mature, larger caliper stems develop numerous wart-like knobs adding a most unique feature to the winter landscape. Certainly a rare plant in cultivated settings yet attractive throughout the year, adaptable to infertile soil and worthy of much wider landscape consideration. 15-20' - #5 \$89.99; #7 \$109.99 (July); Assorted Specimens Individually Priced

Zelkova serrata - Japanese Zelkova - Z5
A popular shade tree valued for its adaptability and vase-shaped habit that is reminiscent of the American elm, *Ulmus americana*. Dark green foliage and attractive gray and brown exfoliating bark provide added appeal. Plants are resistant to Dutch elm disease as well as the elm leaf beetle. 80'

'Bright Park' - A shocking zelkova with jaw dropping, golden-orange foliage and orange-brown winter stems. The few plants we've evaluated to date have been brilliant all season. 30' #3 \$59.99; #7 \$109.99; Assorted Specimens Individually Priced

'Goblin' - A slow growing, bushy zelkova reaching only 4' high and wide at maturity. Rarely offered for sale in the United States but certainly one of the coolest dwarf plants for that tight garden space! - #2 \$39.99; #3 \$59.99; #5 \$99.99; #7 \$129.99; Assorted Specimens Individually Priced

'Goshiki' - An exciting cultivar of this handsome, vase-shaped tree. Offers leaves that are boldly splashed and streaked with white. Plants are somewhat slower growing than the species and grow best in partial shade. We suspect plants will mature around 15-20' in height. - #2 \$39.99; #3 \$59.99 (July)

NEW 'Keiyaku' - A very rare selection of Japanese zelkova that we've been tinkering with for a number of years now. The literature offers up very little detail about this plant so this description has been tough to come by. Plants offer a semi-compact framework and more rounded crown than we see in typical seedling grown plants. The growth is roughly half that of standard but not nearly as slow or congested in growth as 'Goblin'. The foliage is deep green during the growing season and can take on red tones in autumn. We expect this to be a nice mid-sized option for folks who can't accommodate the full scale of the species. Assorted Specimens Individually Priced

NEW *Zelkova x verschaffeltii*
Verschaffelt Cut-leaf Zelkova - Z6
A fun take on zelkova offering up handsome green leaves during the growing season, each with a heavily dissected margin along thin, wiry stems. The texture is feathery and pleasing, sure to add garden presence through the season and into fall as they transition to varied shades of gold and yellow. Plants develop a spreading, somewhat shrubby stature to 30' in height. The original plant was first described in 1892 and is believed to be a hybrid between *Zelkova serrata* and *Z. carpinifolia*. - Assorted Specimens Individually Priced
