

Vines • Broken Arrow Nursery 2018

Actinidia arguta - Hardy Bower Kiwi - Z4

A vigorous, easily cultivated twining vine that is capable of climbing to 20 or 30' with proper support. The alternate, oval leaves are glossy and dark green changing to yellow in autumn. Female plants produce grape-sized edible fruit that are pleasantly yummy! Unfortunately, both male and female plants are required for fruit production.

'Silver Lining' - A fine clone offering handsome, lustrous green leaves stenciled with a clean silver edge. Clusters of pendent, pale olive blossoms dangle from the leaf axils in spring followed by yellowish-green, grape-sized fruit in late summer and autumn. Fruit are edible and enjoyable with a flavor that mixes strawberries and melons with a touch of tartness on the palette. Makes an excellent plant for vertical accent in the garden, especially spaces where quick cover is desired. - #2 \$34.99; #3 \$44.99

Actinidia kolomikta - Hardy Kiwi - Z3

A restrained vine offering vivid white and pink-splashed foliage throughout the growing season. The brightest coloration, present on the tips of the foliage, is reported to develop somewhat showier on male plants. In May and June, 1/2" fragrant, white flowers dangle from the leaf axils. By fall, female plants develop small, greenish-yellow, sweetly flavored kiwis. The twining vines grow best in full sun in any average garden soil. Excess fertilization or shade may reduce the leaf coloration. 15-20' #2 \$34.99; #3 \$44.99; #7 \$89.99

'Arctic Beauty' - Among the hardiest of the kiwi vines this male is sure to please. The strong growers show off impressive foliage with bold pink tips. An excellent pollinator for female selections. - #7 \$89.99

Actinidia tetramera var. *maloides* - Rosy Crabapple Kiwi - Z6

An exceptional species of kiwi vine that may be best described as a refined version of *Actinidia kolomikta* (Hardy Kiwi). Plants offer narrow deep green leaves with pinkish-white tips that appear as if someone painstakingly dipped each leaf in a bucket of paint. Unique, 1" pink blossoms drip from the 15' twining stems in spring. Excellent for use on a trellis, arbor or pergola. - #2 \$34.99; #3 \$44.99 (July); #7 \$89.99

Aristolochia onoei - Onoei Pipe Vine - Z6

An uncommon and most curious diminutive vine that is quite different than its well-known and often bold textured cousins. The slow growing, rather tame, twining plants display tri-lobed leaves that vary in length and extent. Unusual, yellow-maroon, tube-shaped flowers are borne in clusters and are quite comparable to the common Dutchman's pipe (*Aristolochia durior*) in form. Plants are at home in full sun to part shade with even soil moisture. #2 \$34.99; #3 \$44.99

Bignonia capreolata - Cross Vine - Z6

An excellent semi-evergreen twining vine native to the southeastern US where it can be seen clambering up trees or meandering along the ground to 20' in length. In mid spring, plants showcase an impressive floral display of yellow highlighted, reddish-bronze cup-shaped blossoms measuring 2' in length. Rich, evenly moist soils in full sun or bright shade lead to optimum performance.

'Wabash Valley' - An especially cold hardy selection of cross vine that was named and introduced to the trade by friend Ellen Hornig. The initial plant was selected by the late Dr. Wesley Whiteside from the northern reaches of its native range in Wabash Co., Illinois. Ornamental qualities are akin to the straight species with the exception of added hardiness. The strong growing plants take a couple years to settle in but take off once established. #2 \$34.99; #3 \$44.99 (July)

Campsis - Trumpet Vine

A genus of vining species noted for their large, trumpet-shaped blossoms and vigorous growth form.

'grandiflora Morning Calm' - An irresistible selection of trumpet vine that caused the classic stop and drool reaction when we saw it in all its glory a few years ago. The fast growing vines showcase superb, 3", apricot-orange to orange-red blossoms held in clusters at branch ends. Flowers are present through much of the summer and are balanced by rich green, compound leaves. Originally selected and popularized by the late J.C. Raulston. Certainly one of the finest vines for overall floral display. #2 \$34.99; #3 \$44.99 (July)

NEW **'radicans Takarazuka'** PP 12245 - A different take on trumpet creeper offering up pinnate leaves each boldly splashed and streaked with heavy creamy-white variegation. Especially attractive when set off by summer's orange-red flower display. The strong growing plants are sun tolerant and able to climb via root-like holdfasts. Excellent in difficult sites and able to shrug off the rigors of coastal living with little care. #2 \$34.99; #3 \$49.99 (July)

Clematis alpina - Alpine Clematis - Z5

An easily cultivated clematis that is among the earliest species in the group to bloom each year. Each nodding, bell-shaped flower, an inch or two in diameter, grace the climbing vines. Plants thrive with organic rich soil and prefer cool, evenly moist soils. 6-10'

'Stolwijk Gold' PP 18648 - A flamboyant rambling clematis that has caught our attention and may never let go. The 6' semi-vining plants emerge in spring with eye catching golden-yellow foliage that makes for a startling backdrop for May's violet-blue blossoms. Flowers are borne in abundance and are quick to captivate garden visitors and hummingbirds alike. An excellent choice for planting at the base of an open shrub, allowing it to meander with the existing framework. - #2 \$34.99; #3 \$44.99 (July)

Clematis heracleifolia - Tube Clematis - Z4

An herbaceous, non-climbing clematis that develops a mounded framework of leafy stems. In late summer abundant clusters of tube-shaped, 4-petaled flowers appear atop each stem. Seedling grown plants show a range of flower color from pale blue to rich purple. All develop into airy, classic clematis seedheads by autumn. Best growth occurs in full sun or part shade exposures in cool, moist soil that is supplied with consistent moisture. In the garden, we prefer to grow this plant adjacent to shrubs so that they can integrate and support themselves amongst the branch framework. 3' x 2'

'China Purple' - An improved, clonally-propagated selection of tube clematis that shows off saturated, violet-blue flowers in late summer. Flowers are oversized and wider opening than the species. - #1 \$24.99; #2 \$34.99

'Mrs Robert Brydon' - An antique selection of tube clematis that matures 4-5' in height, slightly taller than the straight species. Flowers appear at the apex of the shoots in late summer and are pale-blue in color. Excellent in the garden when provided some support to raise themselves against. - #2 \$34.99; #3 \$44.99

Clematis integrifolia - Solitary Clematis - Z4

A shrubby, non-vining clematis reaching 1.5 to 2' tall, with 2-4" long, dark-green, sessile leaves. The solitary violet-blue flowers appear in late spring and will continue for weeks. The developing flower buds appear facing upwards, but upon opening bow their twisting recurved sepals toward the ground. Prefers moist, fertile soils in full sun. - #2 \$34.99

NEW **'Blue Ribbons'** - A seed strain selection of solitary clematis reported to maintain a compact habit comprised of flop resistant stems. 15-18" - #1 \$24.99 #2 \$34.99 (July)

NEW 'Caerulea' - Selected for its uniform and reliable porcelain blue flowers. Blossoms average 1.5" in diameter and grace plants from mid summer through early fall.
#1 \$24.99; #2 \$34.99 (July)

Clematis montana - Anemone Clematis - Z5
An impressive vine with strong vigor to 20' or more in height. The 3", single flowers appear in mass in May and range in color from pure white to saturated rose depending on cultivar. Flowers are comprised of 4 petals and often emit a pleasant fragrance. Contrasting burgundy-blushed foliage provides added interest in spring. Plants are easy to grow and provide outstanding interest when given proper support and garden prominence.

'Mayleen' - A superb selection that stopped us in our tracks when we first witnessed the large, pinkish-rose, vanilla-scented blossoms. Mature plants offer up hundreds of overlapping flowers that create a dazzling display in May and June.
#1 \$24.99; #2 \$34.99 (July)

Clematis paniculata - Sweet Autumn Clematis - Z4
A strong growing, medium-textured clematis best known for its prolific show of 1", pure white, heavenly scented blossoms in late summer and autumn. Plants are easily cultivated in average garden soils in both full sun and part shade exposures. Support for the vines to climb is essential for the best display. - #2 \$34.99; #3 \$44.99 (July)

Clematis viticella - Purple Clematis - Z4
A strong growing, hardy clematis long valued for its resistance to clematis wilt and capacity to flower on new growth. Breeders have recognized the fine merits of this striking plant and have taken advantage of its pedigree to develop many notable hybrids. The vigorous plants enter bloom time in summer, continuing into early fall on a strong framework of twining and clambering stems. The straight species showcases bell-shaped, purple to blue cast blooms. 15-20'

'Betty Corning' - A much-loved selection of this adaptable species with heritage that dates to the 1930's. The strong growing and disease resistant plants promote an abundance of blue-cast violet blossoms throughout summer and into fall. All this, after welcoming spring with burgundy-flushed new growth. - #2 \$34.99 #3 \$44.99 (July)

Clematis Hybrids - Hybrid Clematis - Z5
A complex group of hybrid vines known for their large, extremely showy blossoms and unique, feathery seed clusters. Plants generally require a trellis, fence or accompanying plant for the twining vines and leaves to cling to. All prefer humus rich soils and grow best in garden locations where the root systems can be shaded and kept evenly moist and cool. We offer an assortment of the best forms available to gardeners.

x 'Alionushka' - A hybrid between the climbing Clematis 'Nezhdanniy' and shrubby *C. integrifolia* and bequeathed a Russian girl's name. The nodding, 2-3" dark pink, bell-shaped flowers develop along its 6-7' non-vining stems. Can be effectively used twining through shrubs of similar height. Prune in late winter to early spring for flowering in early summer to fall. Plant in full sun in moist, well-drained soils. - #1 \$24.99; #2 \$34.99; #3 \$44.99 (July)

x 'Cleminov 51' Sapphire Indigo™ PP 17012
A fine, heavy blooming clematis that lives up to its name with impressive sapphire-blue flowers that emerge for a decidedly long period of time during summer months. Plants blend the line between a shrub and vine showing a compact framework.
#1 \$24.99; #2 \$34.99 (July)

x 'Niobe' - A strong growing selection that showcases magical 5-6" single blossoms colored deep purple-red. These prolific plants begin flowering in late spring and continue right through summer's end. Absolutely one of the best clematis on the market. - #1 \$24.99; #2 \$34.99 (July)

x 'Roguchi' - A favorite clematis selection from Japanese breeder Kazushige Ozawa-sani. The moderate growers sport masses of elegant, purple-blue flowers that drape like bells from the 6' twining stems. Blossoms are produced in succession providing color from late spring through autumn's end.
#1 \$24.99; #2 \$34.99

x 'Sweet Summer Love' PP 24044 - An exciting recent selection that promises to cause quite a stir. 'Sweet Summer Love' combines the fine fragrance and prolific late season display of Clematis paniculata with striking cranberry-wine colored blossoms. Flowering begins in August and continues through late September. - #2 \$34.99; #3 \$44.99 (July)

Gelsemium sempervirens 'Margarita'
Margarita Carolina Jessamine - Z6

A fun, 10-20', semi-evergreen vine native to the southern United States. In late spring and early summer, plants show off masses of pleasantly perfumed, clear yellow, trumpet-shaped flowers backed by high gloss oval leaves. As cold weather sets in the leaves take on a clever bronze-purple hue. 'Margarita', a form selected by the late Don Jacobs of Georgia, is distinct in that it has superior cold hardiness and oversized flowers when compared to average seedlings of the species. For these exceptional qualities the plant was honored with a Gold Medal Award from the Pennsylvania Horticultural Society. In the garden, plants perform admirably in sun or part shade with the support of a fence, trellis or the like.
#1 \$24.99; #2 \$34.99 (July)

Hydrangea anomala ssp. petiolaris
Climbing Hydrangea - Z4

A remarkable clinging vine with outstanding rich green foliage that turns bright butter-yellow in fall. In June and July, fragrant white flowers appear in 6-10" flat-topped clusters. Each inflorescence is composed of showy sterile florets that create a ring around the fertile inner flowers. The flowers remain effective for up to six weeks and age from white to green to brown during this period. Plants are easy to grow and are adaptable to numerous soil and light conditions. They are especially effective when grown on a building or allowed to ramble along a stonewall. - #2 \$34.99; #3 \$44.99; #5 \$69.99; #7 \$89.99 (July)

'Early Light' - A distinctive selection of climbing hydrangea that we're proud to have available this season. 'Early Light' sports new growth in spring that is brightly and prominently colored with creamy-white. As the season develops the leaves gradually transition to a pale green tone with delicate white stippling. Early summer brings a stellar show of white, lace-cap blossoms long associated with the straight species. Plants are a touch slower growing (not necessarily a bad thing) than standard forms owing to the reduced capacity of the variegated leaves to harvest energy from the sun. - #2 \$34.99; #3 \$44.99 (July)

'Kuga Variegated' - A choice climbing hydrangea that has been a standout in our trials over the last few seasons. The dainty, restrained vines showcase glossy deep green foliage with new growth that is heavily streaked and splashed with a mosaic of white, cream and pink. Plants push several flushes of growth throughout the growing season so the foliage remains interesting and colorful. Although slower growing than many cultivars plants will certainly grow large enough to have a strong garden impact.
#2 \$34.99; #3 \$44.99; #5 \$69.99 (July)

'Miranda' - A beautiful climbing hydrangea with dark green leaves edged with a soft yellow margin. Appears to grow somewhat slower than the species. - #2 \$34.99; #3 \$44.99; #5 \$69.99; #7 \$89.99 (July)

NEW 'Sutter's Mill' - Another fine variation of this exquisite clinging vine. We can't get enough of this species and as a result seek out every fun, distinct form we come across. 'Sutter's Mill' is certainly distinct and fun and has captivated our attention with its solid, soft yellow foliage. The leaves are scorch resistant and

make a classy complement to the satin-white lacecap flowers that decorate the stems in summer. Like the species plants are slow to develop but gain vigor and garden presence with each passing season. - #2 \$34.99; #3 \$44.99; #5 \$69.99 (July)

Lonicera periclymenum - Woodbine Honeysuckle - Z5

An uncommon twining species that develops fragrant tubular flowers at the end of the shoots. Typical flowers are yellowish-white with purple overtones and appear throughout the growing season. Flowers are followed by clusters of cranberry-like fleshy red berries. The species is easy to grow and adaptable to many landscape situations in full sun. 15-20'

'Munster' - A highly regarded selection of honeysuckle that parades hot pink flower buds that open to display a contrasting cream-yellow interior. Flowers are quite fragrant and plants show strong mildew resistance. - #3 \$44.99

'Serotina' - An outstanding selection with handsome blue-green foliage and wonderfully fragrant rose-pink flowers with yellow blushed centers. The flowers are produced all growing season and mature into showy bright-red translucent fruit. #1 \$24.99; #2 \$34.99; #3 \$44.99 (July)

Lonicera reticulata 'Kintzley's Ghost'

Kintzley's Ghost Honeysuckle - Z4 - **Native**

A fast growing vine twining and climbing 8-12' tall over several seasons. In June, plants are cloaked with plentiful pale yellow, tube-shaped, flowers held in terminal clusters. Each cluster is backed by a unique, silver-blue, rounded bract that adds wonderful contrast and added interest to the plants. After the flowering period ends the bracts remain on display deep into the autumn months. Easy to grow and an excellent vine for sun-drenched locations in average garden soils. - #2 \$34.99; #3 \$44.99 (July)

Lonicera sempervirens - Trumpet Honeysuckle - Z5 - **Native**

A common, twining vine with an extensive native range extending from Connecticut to Florida, west to Nebraska and Texas. The dense, blue-green leaves make a charming backdrop for the 2" orange to red, trumpet-shaped flowers. Flowers appear in showy, terminal clusters in May and June and are cherished by hummingbirds.

'Alabama Crimson' - An extremely showy selection with 1-2", dark scarlet and yellow bicolor flowers followed by large red berries that persist into fall and winter. - #1 \$24.99; #2 \$34.99

Parthenocissus

A group of climbing vines that are cousins to the grapes. The genus contains around 10 species that inhabit the wilds of North America and Asia. Many are ornamentally appealing and make attractive additions to the garden when grown on an arbor or allowed to wander up the trunk of a tree.

NEW ***henryana*** - Z6 - A fine vine most commonly referred to as the silvervein creeper. The refined climbers get this name from the striking five-parted foliage that is prominently highlighted with a strong silver streak along the midrib of each leaflet. Plants are slower growing and not as thuggish as our native Virginia creeper can be. That said they make a strong statement in the garden and are excellent options for expanding the palette of climbers. Excellent for use in the shaded woodland garden. - #1 \$24.99; #2 \$34.99; #3 \$44.99 (July)

henryana 'Evening Gloves' - Z6 - We're super excited to be able to offer this ultra rare selection of Chinese silvervein creeper after finally building up enough numbers. The restrained vines support palm-shaped leaves that emerge with abundant white and pink tones in spring. As they mature an undertone of blue-green is revealed to accompany prominent silver veins each highlighted with a gentle dusting of white variegation. By autumn a spectacle of vibrant orange, scarlet and pink tones take over. Plants are notably less vigorous than familiar relatives and will benefit from a site with protection from hot afternoon sun and drought. - #2 \$34.99

quinquefolia 'Star Sparkler' - Z5 - **Native**

A restrained selection of our native Virginia creeper with five-parted leaves that are heavily splashed and streaked with white. In autumn the foliage picks up intense scarlet and pink tones that have few rivals. The slow growing vines are easy to grow and are excellent for vertical interest. - #3 \$44.99

tricuspidata 'Fenway Park' - Z4 - A fun twist on a classic vine. 'Fenway Park' Boston ivy was discovered by Dr. Peter Del Tredici as a chance branch sport near the Red Sox famed baseball stadium. The strong growing plants strut vibrant golden-yellow leaves that remain colorful throughout the growing season. In autumn, striking scarlet tones dominate. These salt tolerant plants grow well in both sun and part shade in a full spectrum of soil conditions. - #1 \$24.99; #2 \$34.99; #3 \$44.99 (July)

tricuspidata 'Lowii' - Z4 - A curious vine sporting unique, fine-textured, congested leaves confidently edged with deep incisions. The diminutive greenery of Low's Boston ivy is smaller than the classic species but retains the deep green tones during spring and summer. By autumn, dazzling scarlet tones matched with miniature grape-like purple fruit provide added seasonal appeal. The moderate stems climb via twining qualities as well as the capacity to fasten themselves to structures through the use of suction cup-like holdfasts. An excellent vertical accent plant providing unexpected texture. - #2 \$34.99; #3 \$44.99 (July)

Schizophragma hydrangeoides - Japanese Hydrangea Vine - Z5

A fine woody vine closely allied to the better known climbing hydrangea (*Hydrangea anomala* ssp. *petiolaris*). Plants are similar in form, climbing effortlessly up structures utilizing root-like holdfasts for vertical gain. In summer, broad cream-white flower clusters are borne against a back drop of deep green heart-shaped leaves. Satisfying to grow, plants are tolerant of both shaded locations but show best flower production in sun.

'Moonlight' - The most common form in cultivation.

Plants showcases impeccable blue-green foliage suffused with a clear overlay of silver. In July, delicate flowers comprised of small creamy fertile flowers and snow white, tear-drop shaped sterile florets draw much attention. Introduced to the United States by plant explorer Barry Yinger. - #1 \$24.99; #2 \$34.99; #3 \$44.99; #5 \$69.99 (July)

'Roseum' - A fine form of Japanese hydrangea vine showcasing all of the tantalizing attributes of the species but with flowers of pale pink! Come see it, you'll like it! - #1 \$24.99; #2 \$34.99; #3 \$44.99

NEW ***Tora-fu*** - A most unusual selection of Japanese hydrangea vine that we've been putzing around with for a few years. The strong growing vines have very unique leaf coloration that expresses itself as bold gold and yellow blotches. The quantity and pattern of color among leaves can shift with the vigor of the growth and season. Certainly unique and something that will no doubt get a few fellow plant fanatics excited! - #2 \$34.99; #3 \$44.99

Wisteria frutescens - American Wisteria - Z5

An underutilized native vine from the southeastern United States. Offers an abundance of fragrant, lavender-blue flowers borne in oval, 4-8" dangling racemes. Flowers appear in early to mid summer, notably later than some other species of wisteria. Additionally, plants are more restrained than the aggressive Asian species which are often included on invasive plant lists. Overall, a valuable plant for growing on a trellis or adding vertical accent to other areas of the garden.

'Amethyst Falls' - 'In early to mid summer 'Amethyst Falls' showcases a fine display of 2-4" rounded racemes that support lavender-blue flowers. An exceptional well behaved selection honored as a winner of the 2006 Georgia Gold Medal which designates plants with outstanding garden merit. We can't agree more and find this to be an excellent landscape vine! #2 \$34.99 (July); #3 \$44.99; #7 \$99.99 (July)

Wisteria sinensis - Chinese Wisteria - Z5

A strong growing vine found native throughout much of China. The attractive plants sport compound leaves and are capable of twining to great heights. In spring, graceful pendulous flower clusters of blue-violet dangle from the stems. The long lived plants can be cultivated in shade though the best flower production occurs in sun-drenched locations.

'Kofuji' - A fun texture plant sure to stump your plant geeky friends. This impressive shrub look-a-like touts diminutive pinnately compound leaves more closely resembling tiny fern fronds than classic wisteria leaves. Each deep green leaf is only an inch or two in length and is stacked closely along wiry stems that comprise a form that assumes the stature of a small shrub more closely than a vine. Sadly plants are shy to flower though they make up for it with their unexpected textural distinction and shapely character. 'Kofuji' is well behaved in the garden showing no hint of the thuggish behavior often linked with the genus.

#2 \$34.99; #3 \$44.99; #5 \$69.99; #7 \$89.99

'Variegata' - A striking clone of Chinese wisteria that is often confused with the cultivar of Japanese wisteria, *Wisteria floribunda* 'Mon Nishiki'. Though plants endorse a similar leaf composition and variegation pattern, we find that 'Variegata' struts splashes and streaks more on the white end of the spectrum where as 'Mon Nishiki' blends more yellows and gold. Though we haven't yet witnessed the blossoms of 'Variegata', reports of light purple racemes sound exciting, especially when viewed in concert with the vibrant leaves. - **#3 \$44.99; #7 \$89.99 (July)**
